Description off pyrolytic doorlock

The Doorlock is shown in unlocked position.

Locking:

When power is applied to terminal 3 and 4, the bimetal heater element makes a mechanical pad move to the right. Thereby blocking the door.

At the same time the 3 internal switches changes position, the doorlock is now ready for the unlock procedure.

Unlocking:

Unlocking kan only ocur when thermal protection switch T 130 C is closed = oven temp. approx. 310 C, or lower.

When power is applied to terminal 2 and 3, the bimetal heater element makes a mechanical pad move to the left. Thereby releasing the door.

At the same time the 3 internal switches changes position, the doorlock is now ready for the lock procedure.
