

SERVICE BULLETIN

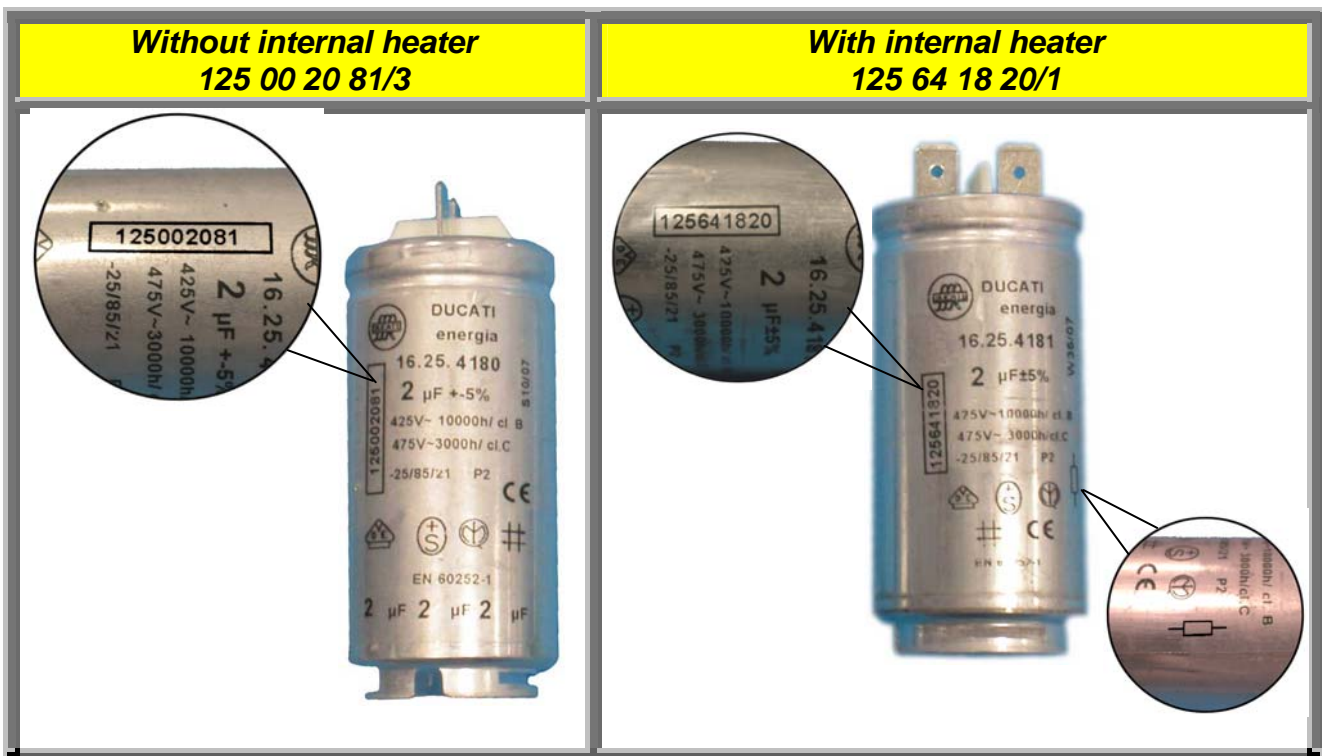

2 µF STARTING CAPACITOR

DESCRIPTION:

In the Siewierz factory (Poland) some B class dryers have been produced with an additional 2µF starting capacitor with an internal heater which discharges it when it is not used. This modification has been carried out to prevent the starting capacitor from remaining charged and being damaged afterwards.

AFFECTED MODELS:

Except for the ENV06 models, all condensed B class dryers that feature the 2 µF starting capacitor. The two capacitors can be identified by the part no. and the symbol of a heater printed on the sides.

SPARE PARTS:

In case of replacement of the capacitor, please pay attention to the type of spare part used. It is necessary to order the part no. **125 64 18 20/1** or following slashes having the internal heater.
