### Injection noise- nofrost

To reduce undesirable noise from the cooling system, damping material should be applied at the evaporator inlet. Align the damping material with the evaporator flush to the bend on the capillary tube, see picture 1.

*Pic 1*

Fold the damping material around the tube and tight properly, see picture 2.

*Pic 2*

**Important: The damping material must be placed as shown in the pictures to avoid interference with the fan.**

The damping material can be ordered from distriparts at ANC 208 00 55-01/1.
