1 EWM1000

1.1 Access to the diagnostic cycle

version with horizontal pushbuttons	version with vertical pushbuttons	
		
<ol style="list-style-type: none"> 1. Switch off the appliance. 2. Press and hold down the START/PAUSE button and any one of the OPTION buttons simultaneously. horizontal version, while for vertical version pushbuttons are 2 and 3. 3. Holding down both buttons, switch the appliance on by turning the programme selector one position clockwise. 4. Continue to hold down the START/PAUSE button and the OPTION button horizontal version, while for vertical version pushbuttons are 2 and 3, until the LEDs begin to flash (at least 2 seconds). 5. To exit the diagnostics system switch the appliance off, on and then off again. 		
<p>IMPORTANT: The position of the START/PAUSE button varies according to the model, and is therefore not always the same.</p>		

1.2 Rapid reading of alarms

The last alarm can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. while the washing programme is in operation):

version with horizontal pushbuttons	version with vertical pushbuttons	
		
<ol style="list-style-type: none"> 1. Press START/PAUSE and any one of the option buttons simultaneously for horizontal version, while for vertical version pushbuttons are 2 and 3, for at least two seconds: the LEDs first switch off, and then display the flashing sequence corresponding to the alarm condition. 2. The alarm sequence continues as long as the two buttons are held down. 3. While the alarms are displayed, the current cycle being performed continues or, if the appliance is in the programme selection phase, the options previously selected remain in memory. 		

1.3 Cancelling the last alarm

version with horizontal pushbuttons	version with vertical pushbuttons	
		
<ol style="list-style-type: none"> 1. Access alarm reading mode (tenth selector position) 2. Press and hold down START/PAUSE and any one of the option keys simultaneously for horizontal version, while for vertical version pushbuttons are 2 and 3. 3. Hold the START/PAUSE and OPTION button down until the LEDs begin to flash (about 5 seconds) 		

1.4 Phases of the diagnostics test

After accessing the diagnostics cycle, and irrespective of the type of control board fitted to the appliance (i.e. vertical or horizontal buttons) and the configuration of the selector, turn the programme selector **clockwise** to perform the diagnostics cycle for the various components and to read the alarms. All the alarms are enabled during the diagnostics cycle.

Position of selector	Components activated	Conditions of operation	Function tested
1 	<ul style="list-style-type: none"> - All the LEDs light in sequence - When a button is pressed, the corresponding LED lights (and the buzzer may sound) 	Always enabled	Operation of the user interface
2 	<ul style="list-style-type: none"> - Door safety interlock - Washing solenoid valve 	Door locked Water level lower than anti-overflow level Maximum time 5 minutes	Water ducted through washing compartment
3 	<ul style="list-style-type: none"> - Door safety interlock - Pre-wash solenoid valve 	Door locked Water level lower than anti-overflow level Maximum time 5 minutes	Water ducted through pre-wash (bleach) compartment
4 	<ul style="list-style-type: none"> - Door safety interlock - Washing and pre-wash solenoid valves 	Door locked Water level lower than anti-overflow level Maximum time 5 minutes	Water ducted through conditioner compartment
6 	<ul style="list-style-type: none"> - Door safety interlock - Wash solenoid (if the water in the tub is below 1st level) - Heating element 	Door locked Water level > 1st level Maximum time 10 minutes or up to 90°C (*)	Heating
7 	<ul style="list-style-type: none"> - Door safety interlock - Wash solenoid (if the water in the tub is below 1st level) - Motor (55 rpm clockwise, 55 rpm anti-clockwise, impulse at 250 rpm) 	Door locked Water level > 1st level	Check for leaks from the tub
8 	<ul style="list-style-type: none"> - Door safety interlock - Drain pump - Motor up to 650 rpm then at maximum spin speed 	Door locked Water level lower than anti-boiling level for spinning	Drain and spin, check for congruence in closure of pressure switch levels
9 	<ul style="list-style-type: none"> - Only for top-loaders with drum positioning system: - Door safety interlock - Motor (25 rpm) - Drain pump 	Door locked Water level lower than anti-boiling level Maximum time 2 minutes	Test for positioning of drum

(*) In most cases, this time is sufficient to check the heating function. However, the time can be increased by repeating the heating phase without draining the water: pass for a moment to a different phase of the diagnostics cycle and then back to the heating check phase (if the temperature is higher than 80°C, heating does not take place).

1.5 Reading the alarms

Proceed as follows to read the last alarm condition stored in the EEPROM on the control board:

- Access diagnostics mode.
- Irrespective of the type of control board and configuration, turn the programme selector **clockwise** to the **tenth position**.

1.5.1 Displaying the alarm

The alarm is displayed by a repeated flashing sequence of the two LEDs (0.4 seconds ON, 0.4 seconds OFF, with a pause of 2.5 seconds between each sequence). The buzzer (if featured) sounds a series of “beeps” in synchronization with the flashing of the LEDs.

- **END OF CYCLE** indicator → indicates the first digit of the alarm code (family)
- **START/PAUSE** → indicates the second digit of the alarm code (number within the family).

These two LEDs are present on all models (though configured in **different positions**) and flash simultaneously.

Notes:

- The first letter of the alarm code “**E**” (Error) is not displayed since it is the same for all alarm codes.
- The alarm code families are expressed in hexadecimal form. In other words:
 - **A** is represented by **10** flashes
 - **B** is represented by **11** flashes
 - ...
 - **F** is represented by **15** flashes
- Configuration errors are displayed by the flashing of all the LEDs (user interface not configured).

1.5.2 Examples of alarm display

Example: Alarm **E43** (problems with the door safety interlock triac) will be displayed as follows:

- four flashes of the END OF CYCLE LED indicate the first digit E43;
- three flashes of the START/PAUSE LED indicate the second digit E43;

END OF CYCLE LED →			START/PAUSE LED ◊		
ON/OFF	Time (seconds)	Value	ON/OFF	Time (seconds)	Value
	0.4	1		0.4	1
	0.4			0.4	
	0.4	2		0.4	2
	0.4			0.4	
	0.4	3		0.4	3
	0.4			0.4	
	0.4	4		3,3	Pause
	0.4				
	2.5	Pause			

1.5.3 Status of alarms during the diagnostics cycle

All the alarms are enabled during the components diagnostics test.

1.6 Table of alarms codes EWM1000

Alarm	Description	Possible fault	Action/Machine status	Reset
E00	No alarm			
E11	Difficulty in filling during wash phase	Tap closed or water pressure insufficient; Drain hose incorrectly positioned; Water fill solenoid faulty; Leaks from pressure switch hydraulic circuit; Pressure switch faulty; Wiring faulty; Circuit board faulty.	Cycle paused, door closed	Start
E13	Water leakage	Drain hose incorrectly positioned; Water pressure insufficient; Water fill solenoid faulty; Leaks or blockage in pressure switch hydraulic circuit; Pressure switch faulty; Circuit board faulty.	Cycle paused, door closed	Start
E21	Difficulties in draining	Drain hose kinked/blocked/incorrectly positioned; Drain filter clogged or dirty; Drain pump faulty; Pressure switch faulty; Wiring faulty; Circuit board faulty; Current leakage from heating element to ground.	Cycle paused	Start
E23	Drain pump triac faulty	Drain pump faulty; Wiring faulty; Circuit board faulty.	Safety drain - Cycle stopped, door open	Selector on "0"
E24	Problems with «sensing» of drain pump triac	Circuit board faulty.	Safety drain – Cycle stopped, door released	Selector on "0"
E33	Incongruence between contact closure of anti-boiling and 1st level of pressure switch	Pressure switch faulty; Current leakage from heating element to ground; Heating element; Wiring faulty; Circuit board faulty.	Safety drain - Cycle stopped, door open	Selector on "0"
E35	Water overflow	Water fill solenoid faulty; Leaks from pressure switch hydraulic circuit; Pressure switch faulty; Wiring faulty; Circuit board faulty.	Cycle blocked, door closed. Safety drain. Drain pump (sequence 5 min. ON - 5 min. OFF)	Selector on "0"
E36	«sensing» circuit of anti-boiling pressure switch faulty	Circuit board faulty.	Cycle blocked, door closed	Selector on "0"
E37	«sensing» circuit of 1st level faulty	Circuit board faulty.	Cycle blocked, door closed	Selector on "0"
E39	HV «sensing» circuit of anti-flooding pressure switch faulty	Circuit board faulty.	Cycle blocked, door closed	Selector on "0"
E41	Door open	Door safety interlock faulty; Wiring faulty; Circuit board faulty.	Cycle paused	Start
E42	Problems with aperture of door	Door safety interlock faulty; Wiring faulty; Circuit board faulty	Cycle paused	Start or Selector on "0"
E43	Power triac on door interlock faulty	Door safety interlock faulty; Wiring faulty; Circuit board faulty.	Safety drain, door released	Selector on "0"
E44	Door interlock «sensing» faulty	Circuit board faulty.	Safety drain, door released	Selector on "0"
E45	«sensing» on door interlock triac faulty	Circuit board faulty.	Safety drain, door released	Selector on "0"
E51	Motor power triac short-circuited	Circuit board faulty; Current leakage from motor or wiring.	Cycle blocked, door closed (after 5 attempts in diagnostics or immediate during selection)	Selector on "0"
E52	No signal from motor tachimetric generator	Motor faulty; Wiring faulty; Circuit board faulty.	Cycle blocked, door closed (after 5 attempts in diagnostics or immediate during selection)	Selector on "0"
E53	«sensing» circuit on motor triac faulty	Circuit board faulty.	Cycle blocked	Selector on "0"

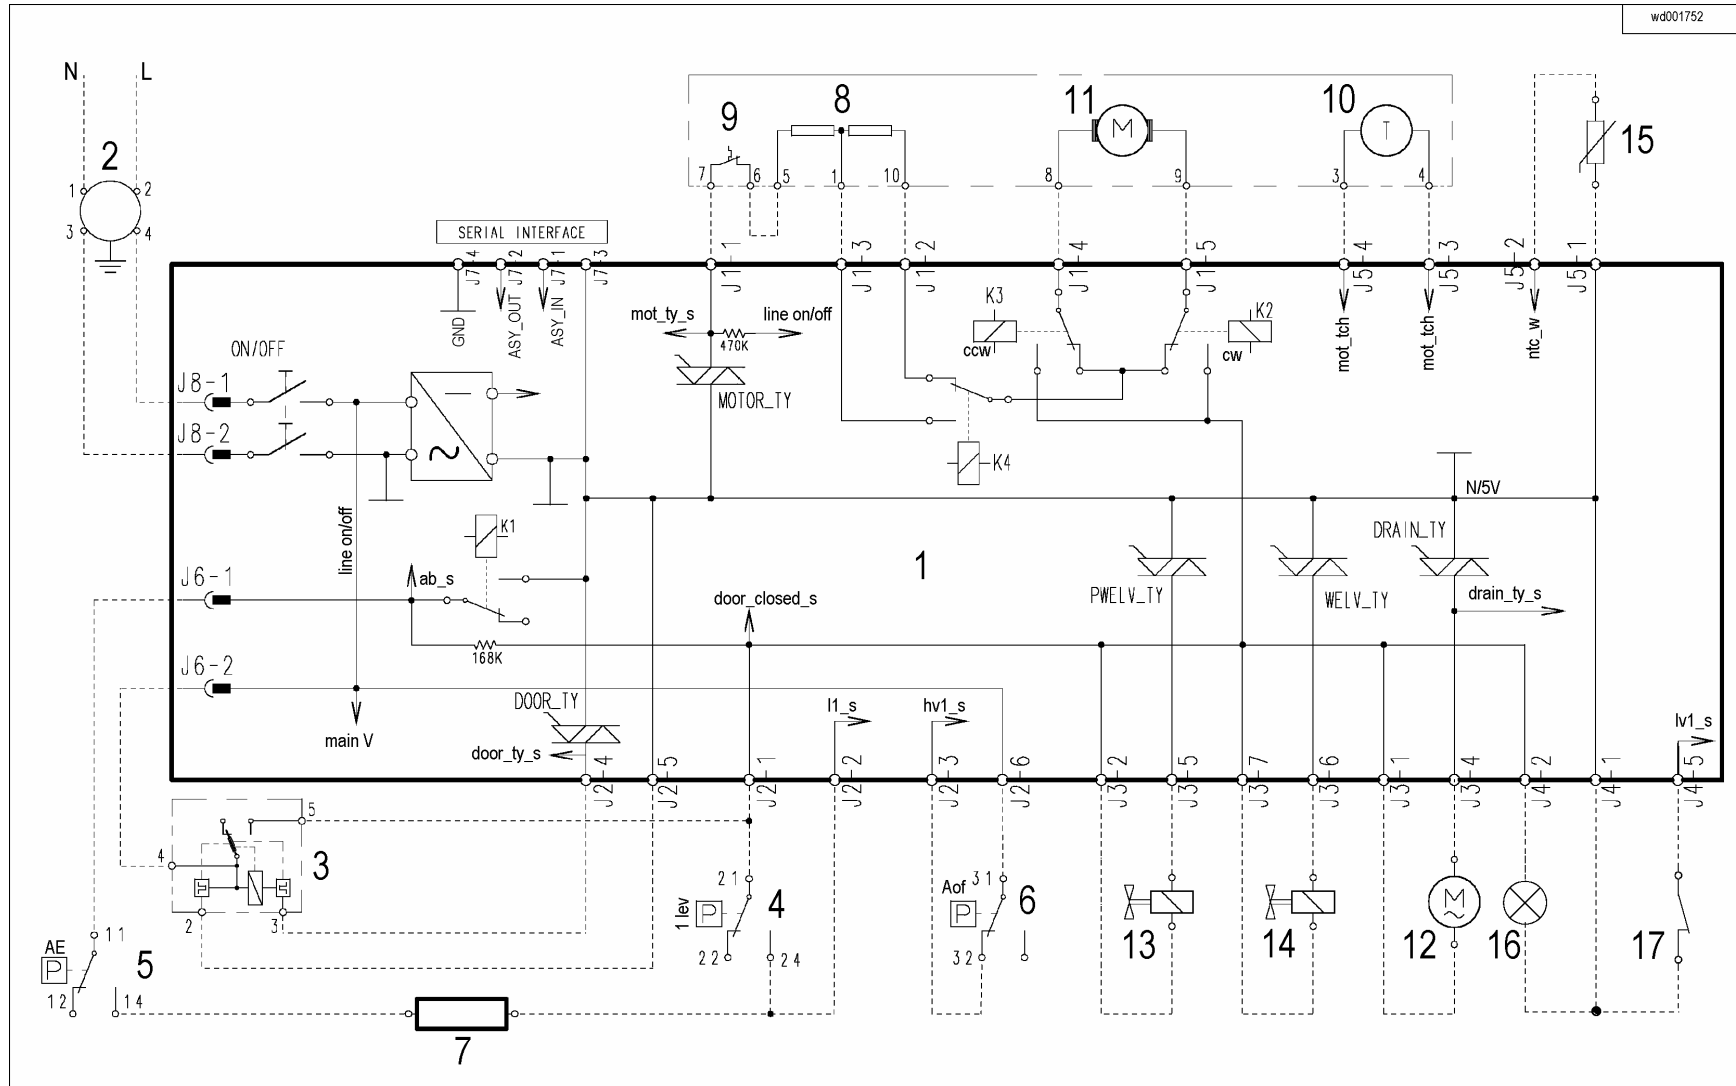

Alarm	Description	Possible fault	Action/Machine status	Reset
E54	Motor relay contacts sticking	Circuit board faulty; Current leakage from motor or wiring.	Cycle blocked, door closed (after 5 attempts in diagnostics or immediate during selection)	Selector on "0"
E61	Insufficient heating during washing	NTC sensor faulty; Heating element faulty; Wiring faulty; Circuit board faulty.	Heating phase skipped	---
E62	Overheating during washing	NTC sensor faulty; Heating element faulty; Wiring faulty; Circuit board faulty.	Safety drain (with cooling water fill) - Stop with door open	Selector on "0"
E66	Power relay for heating element faulty	Circuit board faulty; Current leakage from heating element or wiring to ground.	Safety drain (with cooling water fill) - Stop with door open	Selector on "0"
E71	NTC washing sensor faulty	NTC sensor faulty; Wiring faulty; Circuit board faulty.	Heating phase skipped	---
E82	Error in reset position of selector	Circuit board faulty.	Cycle cancelled	Selector on "0"
E83	Error in reading selector position	Configuration data incorrect; Circuit board faulty.	During the cycle continues normally, switches off completely during selection	---
E93	Incorrect machine configuration	Configuration data incorrect; Circuit board faulty.	Appliance blocked	Selector on "0"
E94	Incorrect washing cycle configuration	Configuration data incorrect; Circuit board faulty.	Appliance blocked	Selector on "0"
E95	Communications error between microprocessor and EEPROM	Circuit board faulty.	Appliance blocked	Selector on "0"
E96	Incongruence between hardware version and configuration.	Configuration data incorrect; Circuit board faulty.	Appliance blocked	Selector on "0"
E97	Incongruence between programme selector and cycle configuration	Configuration data incorrect; Circuit board faulty.	Appliance blocked	Selector on "0"
EB1	Power supply frequency of appliance incorrect	Mains power supply problems (incorrect / interference); Circuit board faulty.	Cycle blocked until normal power supply conditions are restored	Selector on "0"
EB2	Voltage too high	Mains power supply problems (incorrect / interference); Circuit board faulty.	Cycle blocked until normal power supply conditions are restored	Selector on "0"
EB3	Voltage too low	Mains power supply problems (incorrect / interference); Circuit board faulty.	Cycle blocked until normal power supply conditions are restored	Selector on "0"

1.6.1 Notes concerning certain alarm codes

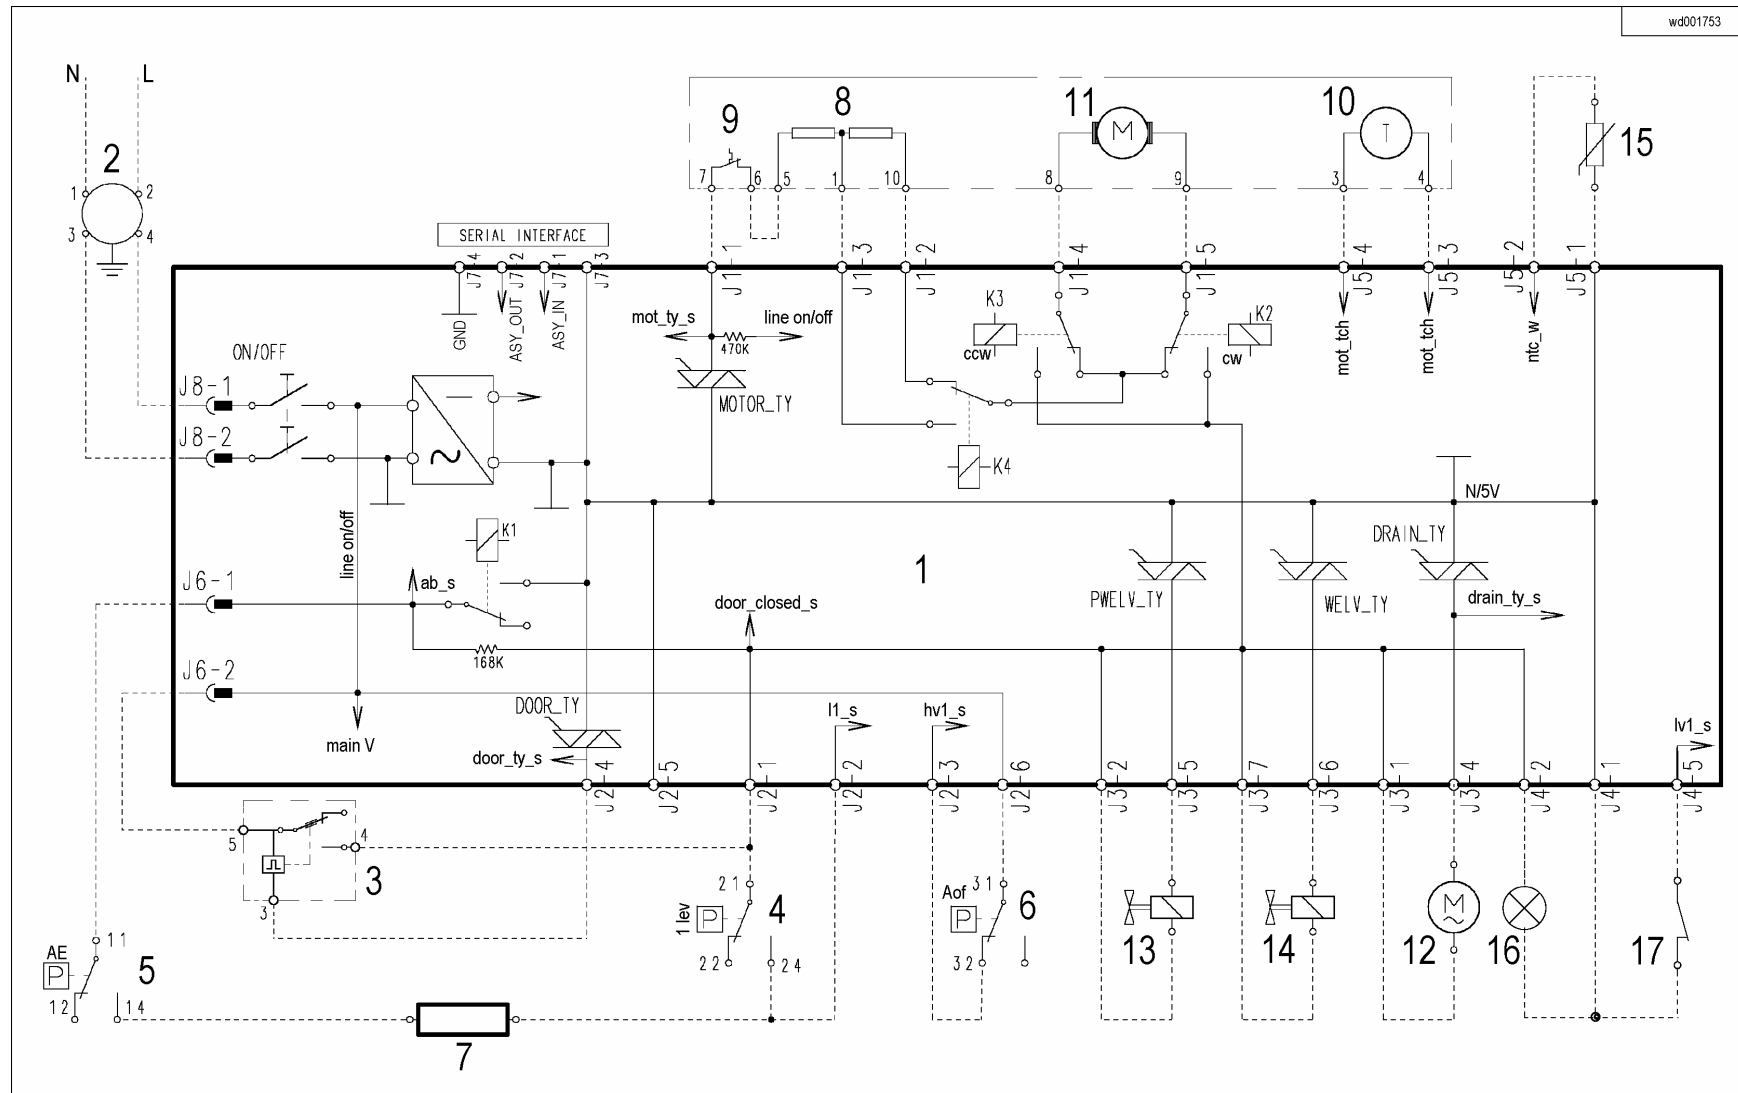

- **Configuration alarms E93-E96:** If these alarms are generated (when the appliance is switched on), operation of the appliance is blocked and all the LEDs light. The diagnostics procedure cannot be accessed; the only option is to switch the appliance OFF (by turning the selector to position "0").
- **Configuration alarm E94:** For this alarm code, only the family for alarm "9" is displayed; the diagnostics procedure cannot be accessed, and the "rapid alarm display" function cannot be used.
- **Alarms EB1-EB2-EB3:** In the event of problems with the mains power supply, the appliance remains in alarm mode until the mains frequency or voltage are restored to the correct value or the appliance is switched off (by turning the programme selector to "0"). The family of alarm "B" is displayed; the diagnostics procedure cannot be accessed, and the "rapid alarm display" function cannot be used. The complete alarm code can be read only when the abnormal situation has ceased.
- **Alarms E51- E52:** During the diagnostics test, all the alarms are displayed. Normally, when the programme selector is turned from one test phase to another, the appliance exits the alarm condition and performs the phase selected. This does not take place in the case of alarms E51 (power triac on motor short-circuited) and E52 (no signal from the tachymetric generator on the motor): in these cases, the only option to exit the alarm condition is to switch the appliance OFF by turning the selector to position "0" (reset).

1.10 Burning on the circuit board EWM1000

1.10.1 EWM1000

In case of burning on the main circuit board, check that the problem is not caused by another electrical component (short-circuits, poor insulation, water leakage). Refer to the figures below in order to identify the component that might have caused the burning according to the position of the burned area.

The circuit board shown below is the version with the greatest number of components: other boards may not feature all these components (relay K4 and buzzer).

1.10.2 Components side (common)

| | 9. Drum positioning system (top-loaders) |

2 EWM1000plus 2000evo 3000new

2.1 Control panel

The configuration of the control panel depends on the following:

- ↙ Type of control/display board (with or without display)
- ↙ Design of the control panel and position of the programme selector (right or left of the buttons)
- ↙ Number and configuration of the buttons (max. 8)
- ↙ ON/OFF switch: incorporated in the programme selector or with separated button

2.2 Sigma/Alpha/Ellipse//Multipanel Built-In/Sigma-ZK/Jewel with or without selector

2.2.1 Access to diagnostics system

Attention: the programme selector is not always in the position indicated in the picture; it can be on the right or on the left of the display board!

Version with selector and button ON/OFF switch	
	
<ol style="list-style-type: none"> 1. Cancel the set programme and switch the appliance off. 2. Rotate the programme selector of one positions clockwise. 3. Press the start/pause (8) button and any of the option button simultaneously and then, keeping them pressed, switch the appliance on through the ON/OFF button (on/off). 4. Hold the start/pause and option buttons down till the LEDs start flashing (about 5 seconds). 5. To exit the diagnostics system switch the appliance off, on and then off again. 	
Version with selector and incorporated ON/OFF switch	
	
<ol style="list-style-type: none"> 1. Cancel the set programme switching the appliance off. 2. Press the start/pause (8) button and any of the option buttons simultaneously and then, keeping them pressed, switch the appliance on rotating the programme selector of one position clockwise. 3. Hold the start/pause and option buttons down till the LEDs start flashing (about 5 seconds). 4. To exit the diagnostics system switch the appliance off, on and then off again. 	

2.2.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ☞ Press and hold down **START/PAUSE** and the option button nearest to the START/PAUSE button for at least two seconds: the LEDs initially switch off, and then display the flashing sequence corresponding to the alarm; if the display is featured, it will display the alarm code
- ☞ The alarm sequence is displayed for the time in which the buttons are hold down
- ☞ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.2.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance.

1. Select diagnostics mode and turn the programme selector to the **tenth** position (reading of alarm)
2. Press and hold down **START/PAUSE** and **any of the option buttons** at the same time for five seconds.

2.3 AEG NexXxt Version with selector and incorporated ON/OFF switch

2.3.1 Access to diagnostics system

1. Cancel the set programme and switch the appliance off.
2. Press buttons **1** and **5** (or button **2** and **6**) simultaneously and then, holding them down, switch the appliance on by rotating the programme selector of **one position clockwise**.
3. To exit the diagnostics system switch the appliance **off, on** and then **off** again.

2.3.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ↖ Press buttons **1** and **5** simultaneously for at least 2 seconds: the LED switch off and then display the sequence of flashes indicating the alarm.
- ↖ The alarm sequence is displayed for the time in which the buttons are hold down
- ↖ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.3.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostics mode and turn the programme selector to the **tenth** position (reading of alarm)
2. Press buttons **1** and **5** simultaneously.
3. Hold buttons **1** and **5** down (about 2 seconds).

2.4 AEG New Version with right selector and incorporated ON/OFF switch

2.4.1 Access to diagnostics system

1. Cancel the set programme and switch the appliance off.
2. Press buttons **1** and **2** simultaneously and then, holding them down, switch the appliance on by rotating the programme selector of **one position clockwise**.
3. To exit the diagnostics system switch the appliance **off, on** and then **off** again.

2.4.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ↵ Press buttons **1** and **2** simultaneously for at least 2 seconds: the LED switch off and then display the sequence of flashes indicating the alarm.
- ↵ The alarm sequence is displayed for the time in which the buttons are hold down
- ↵ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.4.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostics mode and turn the programme selector to the **tenth** position (reading of alarm)
2. Press buttons **1** and **2** simultaneously.
3. Hold buttons **1** and **2** down (about 2 seconds).

2.5 DELTA Version without selector and button ON/OFF switch

2.5.1 Access to diagnostics system

1. Reset the set programme with the **SKIP/RESET** button and then switch the appliance off.
2. Press the **START/PAUSE** and **SKIP/RESET** buttons simultaneously and then, holding the buttons down, switch the appliance on using the **ON/OFF** button.
3. Hold the buttons down until the buzzer sounds and the LEDs start flashing (about 4 seconds).
4. To exit the diagnostics system switch the appliance off, on and then off again.

2.5.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ✦ Press **START/PAUSE** and **SKIP/RESET** buttons simultaneously for at least 2 seconds: the LEDs switch off and then display the sequence of flashes indicating the alarm.
- ✦ The alarm sequence is displayed for the time in which the buttons are hold down
- ✦ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps the options previously chosen in memory.

2.5.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostics mode and Press the Fabric (1) or Temperature (2) button until LED L10 lights (reading of alarm).
2. Press and hold down **START/PAUSE** and **START/RESET**.

2.6 CLUB DISPLAY Version with selector and incorporated ON/OFF switch

2.6.1 Access to diagnostics system

1. Cancel the set programme and switch the appliance off.
2. Press buttons **8** and **7** simultaneously, then, holding them down, switch the appliance on rotating the programme selector of **one position clockwise**.
3. Hold the buttons down up to **DIAGNOSTIC MODE** appears (about 5 seconds).
4. To exit the diagnostics system switch the appliance **off, on** and then **off** again.

2.6.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ↪ Five minutes after the switching on, press and hold down the **8** and **7** buttons simultaneously for 2 seconds, the LCD display shows the last alarm codes (of the main board and display board). The displaying of the alarms depends on the time in which the buttons are hold down.
- ↪ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.6.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostics mode and turn the programme selector to the **tenth** position (reading of alarm)
2. Press simultaneously buttons **8** and **7**.
3. Hold them down until the alarms are cancelled.

2.7 LCD Version without selector and button ON/OFF switch

2.7.1 Access to diagnostics system

1. Reset the set programme and switch the appliance off.
2. Press the **10 and 11** buttons, simultaneously, then, holding them down, switch the appliance on with ON/OFF button.
3. Hold the buttons down till DIAGNOSTIC MODE appears (about 5 seconds).
4. To exit the diagnostic system switch the appliance **off, on** and then **off** again.

2.7.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ↪ Five minutes after the switching on, press and hold down the **10** and **11** buttons simultaneously for 2 seconds, the LCD display shows the last alarm codes (of the main board and display board). The displaying of the alarms depends on the time in which the buttons are hold down.
- ↪ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.7.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostic mode and with button **4** go to **tenth** position (alarm reading)
2. Press simultaneously buttons **10** and **11**.
3. Hold them down until the alarms are cancelled.

2.8 LCD Version with selector and button ON/OFF switch

2.8.1 Access to diagnostics system

1. Cancel the set programme and switch the appliance off.
2. Press the **start/pause** and **exit** buttons simultaneously, then, holding them down, switch the appliance on rotating the programme selector of **one position clockwise**.
3. Hold the **START/PAUSE** and **EXIT** buttons down up to **DIAGNOSTIC MODE** appears (about 5 seconds).
4. To exit the diagnostic system switch the appliance **off**, **on** and then **off** again.

2.8.2 Rapid reading of alarm codes

The last alarm code can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- ↖ Five minutes after the switching on, press and hold down the **START/PAUSE** and **EXIT** buttons for 2 seconds, the LCD displaying shows the last alarm codes (of the main board and display board). The displaying of the alarms depends on the time in which the buttons are hold down.
- ↖ During the time the alarm is displayed, the appliance continues to perform the cycle or, if it is in the selection phase, it keeps in memory the options previously chosen.

2.8.3 Cancelling the last alarm

It is good practice to cancel the last alarm, after reading the alarm code to check whether the alarm re-occurs during the diagnostics control after the reparation of the appliance

1. Select diagnostics mode and turn the programme selector to the **tenth** position (reading of alarm)
2. Press simultaneously **START/PAUSE** button and button **EXIT** (nearest option to **START/PAUSE** button).
3. Hold down the **START/PAUSE** and **EXIT** button until the alarms are cancelled.

2.9 Phases of the diagnostics test

Independently of the type of selector, after activating the diagnostics system, the operation diagnostics of the different components and the reading of the alarms can be performed, by rotating the selector **clockwise**.

In models with digit the code of the selector position is displayed for a second.

In the diagnostics cycle all alarms are activated. If during the cycle operation an alarm occurs, the appliance blocks and the LEDs (and the display) flash indicating the relative code.

Diagnostics phases						
	Selector	Only pushbutton	Components actioned	Operating conditions	Function checked	Displayed parameters (1)
1			All the LEDs light in sequence. When a button is pressed, the corresponding LED lights (and the buzzer, if featured, sounds)	Always activated	Operation of the user interface	Button codification
2			Door interlock Washing solenoid	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through washing compartment	(**) Selection position code
3			Door interlock Pre-wash solenoid	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through pre-wash compartment (bleach)	(**) Selection position code
4			Door interlock Pre-wash and wash solenoids	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through conditioner compartment	(**) Selection position code
5			Door interlock. Bleach/stains solenoid.	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through bleach/stains compartment	(**) Selection position code
6			Door interlock Washing solenoid if the level of water in the tub is below 1st level Heating element.	Door locked. Water at 1st level. Maximum time 10 min. or up to 90°C. (*)	Heating	(**) Selection position code
7			Door interlock. (Washing solenoid if the level of water in the tub is below 1st level). Motor (55 rpm clockwise, 55 rpm counter-clockwise, 250 rpm impulse)	Door locked Water level at 1st level.	Check for leaks from the tub	(**) Selection position code
8			Door interlock Drain pump Motor up to 650 rpm then at maximum spin speed	Door locked Water level lower than anti-boiling level for spinning	Drain and spin; control of congruence in closure of level pressure switches	(**) Selection position code
9			Drying heater Fan Condensation solenoid Drain pump Motor	Door closed	Drying	(**) selector position code

<p>10</p>		<p>Reading/cancelling last alarm</p>	<p>Alarm code</p>
<p>11, 12 ...24</p>		<p>All LEDs light in sequence. Pressing a button the corresponding LED lights (and the Buzzer sounds, if featured)</p>	

(*)In most cases, this time is sufficient to check the heating. However, the time can be increased by repeating the phase without draining the water: for a moment to a different phase of the diagnostics cycle and then back to the heating control phase (if the temperature is higher than 80°C, heating does not take place).

(**) See tables of following pages.

(1) Models with Display.

2.10 Reading the alarm codes

In order to read the last alarm code memorized in the EEPROM on the PCB:

with knob

- Enter diagnostics mode
- Irrespective of the type of PCB and configuration, turn the programme selector **clockwise** to the **tenth position**.

without knob

- Press the Fabrics (1) or Temperature (2) button until LED L10 lights.

2.10.1 Displaying the alarm

The alarm is displayed by a repeated flashing sequence of the two LEDs (0.4 seconds lit, 0.4 seconds off, with an interval of 2.5 seconds between sequences). *The buzzer (if featured) will sound "bips" in synchronization with the flashing of the LEDs.*

- **END OF CYCLE LED** → indicates the first digit of the alarm code (family)
- **START/PAUSE** → indicates the second digit of the alarm code (number within the family)

These two LEDs are featured on all models (though they are **configured differently**), and flash simultaneously.

Notes:

- The first letter of the alarm code "E" (Error) is not displayed, since this letter is common to all alarm codes.
- The alarm code "families" are shown in hexadecimal; in other words:
 - **A** is represented by 10 flashes
 - **B** is represented by 11 flashes
 - ...
 - **F** is represented by 15 flashes
- Configuration errors are shown by the flashing of a series of LEDs.

2.10.2 Examples of alarm displays

Example: Alarm E43 will display the following:

- On the display, if featured, **E43**
- The sequence of **four** flashes of the **End-of-cycle LED** indicates the first number **E43**;
- The sequence of **three** flashes of the **Start/Pause LED** indicates the second number **E43**;

END-OF-CYCLE LED →			START/PAUSE LED ◊		
On/Off	Time (Sec.)	Value	On/Off	Time (Sec.)	Value

2.11 Table of alarms codes EWM 1000plus EWM2000EVO EWM3000NEW

Alarm	Description	Possible malfunction	Action/status of machine	Reset
E00		No alarm		---
E11	Poor water fill before wash cycle	Tap closed or water pressure too low; Drain tube improperly positioned; Water fill solenoid valve is defective; Leaks from water circuit on pressure switch; Pressure switch defective; Wiring defective; Main board defective.	Cycle is paused with door locked	Start
E12	Difficulty in water fill during drying (maximum time 3 min. water fill in drying during the wash load unrolling phase)	Tap closed or water pressure too low; solenoid valve; pressure switch water circuit; pressure switches; wiring; main board.	Cycle is paused	Start
E13	Water leaks	Drain tube improperly positioned; Water pressure too low; Water fill solenoid valve is defective; Water circuit on pressure switch is leaking/clogged; Pressure switch defective.	Cycle is paused with door locked	Start
E21	Poor draining	Drain tube kinked/clogged/improperly positioned; Drain filter clogged/dirty; Drain pump defective; Pressure switch defective; Wiring defective; Main board defective; Electrical current leak between heating element and ground.	Cycle is paused	Start
E22	Difficulty in water fill during drying or drying condenser clogged (anti-boiling pressure switch closed on "FULL")	Drain hose kinked; filter clogged; drying condenser clogged; drain pump faulty; pressure switches faulty; wiring; main circuit board defective; current leakage between heater and ground.	Cycle is paused	Start
E23	Defective triac for drain pump	Drain pump defective; Wiring defective; Main board defective.	Emergency drain procedure - Cycle stops with door unlocked	OFF/reset
E24	Malfunction in sensing circuit on triac for drain pump	Main board defective.	Emergency drain procedure - Cycle stops with door unlocked	OFF/reset
E31	Malfunction in pressure switch circuit (frequency of signal from pressure switch out of limits)	Pressure switch; Wiring; Main board;	Cycle stops with door locked	OFF/reset
E32	Electronic pressure switch improperly calibrated (level on electronic pressure switch differs from 0-66 mm after initial calibration drain and when antiboiling pressure switch is on "empty").	Tap is closed or water pressure is too low; Solenoid valve; Water circuit on pressure switches; pressure switches; Wiring; main board;	Cycle is paused	Start
E33	Inconsistency between level on electronic pressure switch and level on antiboiling pressure switch 1-2 (fault persists for at least 60 sec.).	Pressure switch defective; Electrical current leak between heating element and ground; Heating element; Wiring defective; Main board defective. Water circuit;	Emergency drain procedure - Cycle stops with door unlocked	OFF/reset
E34	Inconsistency between level on electronic pressure switch and level on antiboiling pressure switch 2 (fault persists for at least 60 sec.).	Pressure switch defective; Electrical current leak between heating element and ground; Heating element; Wiring defective; Main board defective. Water circuit;	Emergency drain procedure - Cycle stops with door unlocked	OFF/reset

Alarm	Description	Possible malfunction	Action/status of machine	Reset
E35	Overflow	Water fill solenoid valve is defective; Leaks from water circuit on pressure switch; Pressure switch defective; Wiring defective; Main board defective.	Cycle stops. Emergency drain procedure. Drain pump continues to operate (5 min. on, then 5 min. off, etc.).	OFF/reset
E36	Sensing circuit on antiboiling pressure switch 1 defective	Main board defective. Electrical current leak between drying heating element and ground	Cycle stops with door locked	OFF/reset
E37	1st level sensing circuit faulty	PCB faulty.	Cycle blocked, door locked.	OFF/reset
E38	Pressure chamber blocked (water level does not vary for at least 30 sec. during drum rotation)	Pressure switch hydraulic circuit; Pressure switches; Motor drive belt broken;	Heating phase skipped.	---
E39	"HV" sensor of anti-overflow level faulty	PCB faulty.	Cycle blocked, door locked.	OFF/reset
E3A	Heating elem. relay sensing faulty	PCB faulty.	Cycle blocked, door locked	OFF/reset
E41	Door open	Door interlock faulty; wiring faulty; PCB faulty.	Cycle paused	Start
E42	Problems of door closure	Door interlock faulty; wiring faulty; PCB faulty.	Cycle paused	Start
E43	Interlock power supply triac faulty	Door interlock faulty; wiring faulty; PCB faulty.	(Safety drain cycle) Cycle blocked	OFF
E44	Door interlock sensor faulty	PCB faulty.	(Safety drain cycle) Cycle blocked	OFF
E45	Door interlock sensing circuit triac faulty	PCB faulty	(Safety drain cycle) Cycle blocked	OFF
E51	Motor power supply triac short-circuited	PCB faulty; current leakage from motor or from wiring.	Cycle blocked, door locked (after 5 attempts)	OFF/reset
E52	No signal from motor tachometric generator	Motor faulty; wiring faulty; PCB faulty	Cycle blocked, door locked (after 5 attempts)	OFF/reset
E53	Motor triac sensing circuit faulty	PCB faulty.	Cycle blocked, door locked	OFF/reset
E54	Motor relay contacts sticking	PCB faulty; current leakage from motor or from wiring	Cycle blocked, door locked (after 5 attempts)	OFF/reset
E57	Inverter is drawing too much current (>15A)	Motor defective; Wiring defective on inverter for motor, inverter board defective.	Cycle stops with door locked (after 5 attempts).	OFF/reset
E58	Motor is drawing too much current (>4.5A)	Motor defective; Wiring defective on inverter for motor, inverter board defective, abnormal motor operation (motor overloaded).	Cycle stops with door locked (after 5 attempts).	OFF/reset
E59	No signal from tachometric generator for more than 3 seconds	Motor defective; Wiring defective on inverter for motor; Inverter board defective.	Cycle stops with door locked (after 5 attempts).	OFF/reset
E5A	Overheating on heat dissipater for inverter	Inverter board defective. NTC open (on the inverter board). Overheating caused by continuous operation or ambient conditions (let appliance cool down)	Cycle stops with door locked (after 5 attempts).	OFF/reset
E5B	Input voltage is lower than 175V	Wiring defective, Inverter board defective	Cycle stops with door locked (after 5 attempts).	OFF/reset
E5C	Input voltage is too high	Inverter board defective, the mains voltage is too high (measure the mains voltage)	Cycle stops with door locked (after 5 attempts).	OFF/reset
E5D	Data transfer error between inverter and main board	Line interference, Wiring defective, defective main board or inverter board	Cycle stops with door locked (after 5 attempts).	OFF/reset

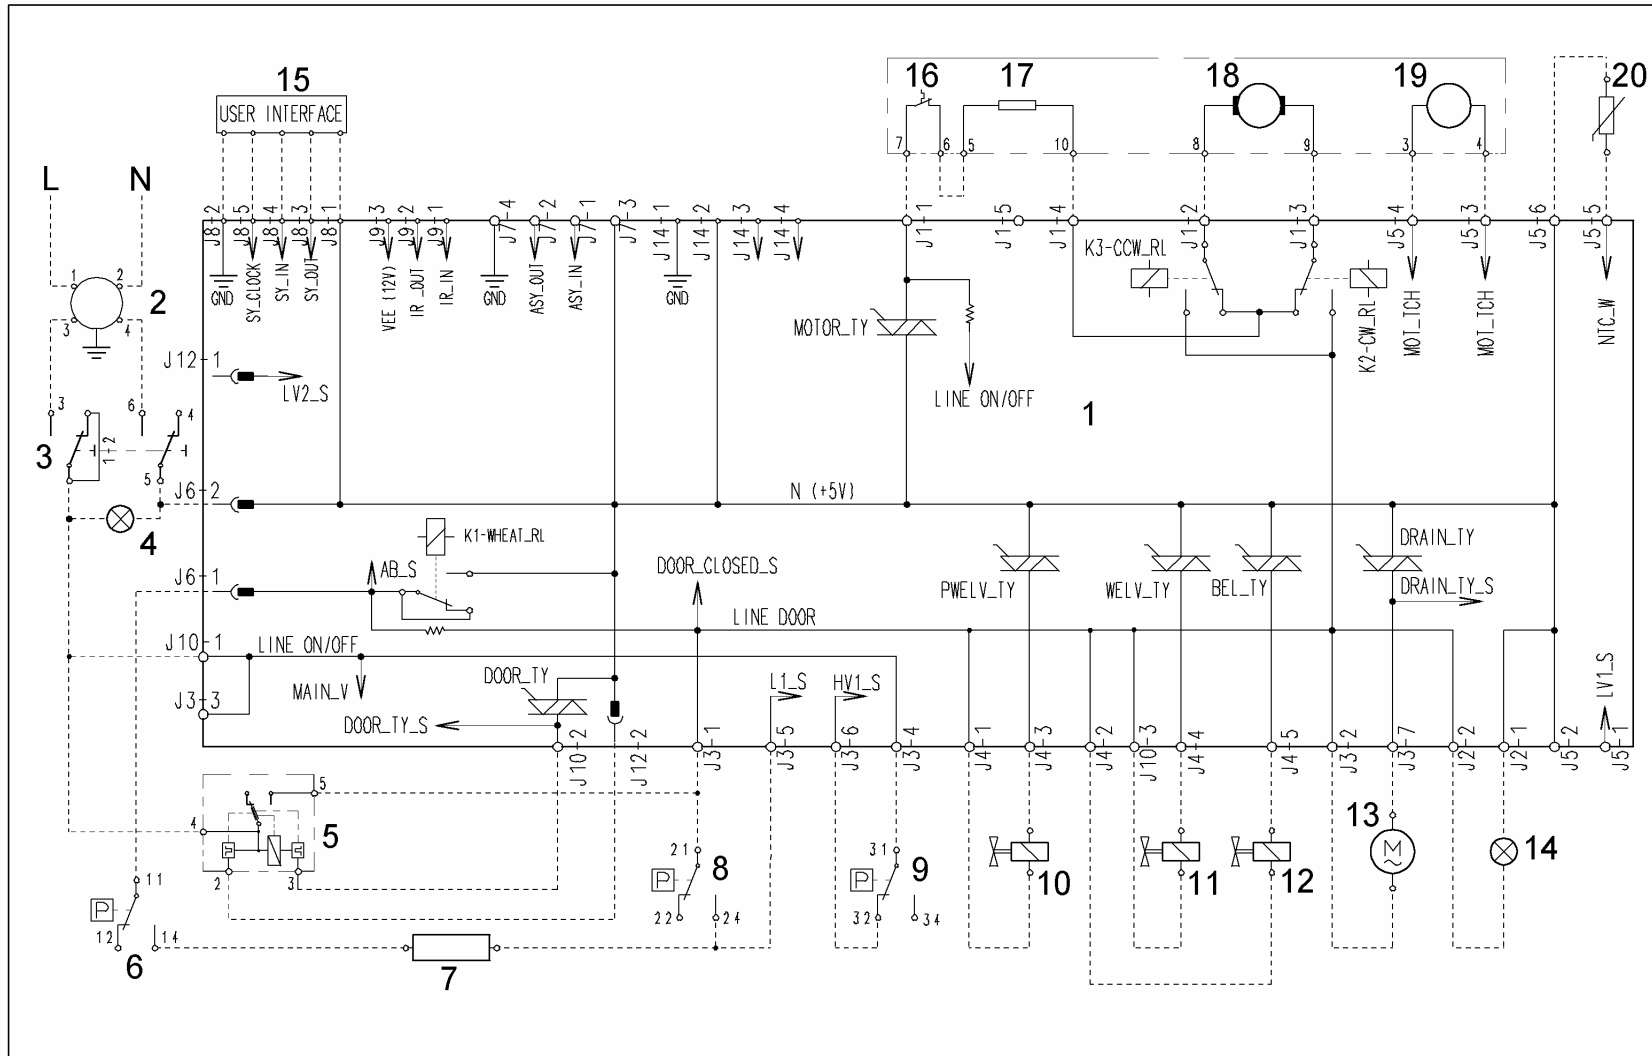

Alarm	Description	Possible malfunction	Action/status of machine	Reset
E5E	Communication error between inverter and main board	Defective wiring between main board and inverter board, Defective inverter board, defective main board	Cycle stops	OFF
E5F	Inverter board fails to start the motor	Defective inverter board, Defective wiring, defective main board	Cycle stops with door locked (after 5 attempts).	OFF/reset
E61	Insufficient heating during wash cycle	Defective NTC sensor for wash cycle; Heating element defective; Wiring defective; Main board defective.	Heating phase is skipped	Start
E62	Overheating during wash cycle	Defective NTC sensor for wash cycle; Heating element defective; Wiring defective; Main board defective.	Safety drain cycle - Cycle stops with door unlocked	OFF/reset
E66	Relay supplying power to heating element defective	Main board defective; Electrical current leak from heating element to ground.	Safety drain cycle - Cycle stops with door unlocked	OFF/reset
E71	NTC sensor for wash cycle defective	Defective NTC sensor; Wiring defective; Main board defective.	Heating is skipped	Start
E72	Fault in NTC sensor on drying condenser (voltage out of range = short-circuit, open circuit)	Drying NTC sensor (condenser) defective; wiring defective; main circuit board defective.	Heating is skipped	Start
E73	Fault in NTC sensor on drying duct (voltage out of range = short-circuit, open circuit)	Drying NTC sensor (duct) defective; wiring defective; main circuit board defective.	Heating is skipped	Start
E74	NTC sensor for wash cycle improperly positioned	NTC sensor improperly positioned; Defective NTC sensor; Wiring defective; Main board defective.	Heating is skipped	Start
E82	Error in selector reset position	PCB faulty (Wrong configuration data). Selector, wiring	---	OFF/reset
E83	Error in reading selector	PCB faulty (Wrong configuration data). Selector, wiring	Cycle cancelled	---
E84	Recirculation pump defective (inconsistency between the state of the sensing circuit for the recirculation pump and the state of the triac)	Recirculation pump; Wiring; Main board;	Machine drains and cycle stops (with door unlocked)	OFF/reset
E85	Defective sensing circuit on triac for recirculation pump (input voltage on microprocessor remains at 0 or 5 V).	Main board	Machine drains and cycle stops (with door unlocked)	OFF/reset
E91	Communication error between main board and display board	Wiring defective; Control/display board defective Main board defective.	Cycle stops	---
E92	Inconsistency in communication between main board and display board (versions not compatible)	Wrong control/display board; Wrong main board (not right for model).	Cycle stops	---
E93	Configuration error on appliance	Main board defective (Improper programming).	Cycle stops	OFF/reset
E94	Configuration error on wash cycle	Main board defective (Improper programming).	Cycle stops	OFF/reset
E95	Communication error between microprocessor and EEPROM	Main board defective.	Cycle stops	OFF/reset
E97	Inconsistency between list of programmes and configuration of cycle	Main board defective (Improper programming).	Cycle stops	OFF/reset
E98	Communication error between microprocessor and clock	Display board faulty	The cycle continues	-----
EB1	Frequency of power supplied to appliance out of limits	Problems with the power mains (wrong power/interference); Main board defective.	Cycle stops	---

EWM1000plus EWM2000evo EWM3000new

Alarm	Description	Possible malfunction	Action/status of machine	Reset
EB2	Input voltage too high	Problems with the power mains (wrong power/interference); Main board defective.	Cycle stops	---
EB3	Input voltage too low	Problems with the power mains (wrong power/interference); Main board defective.	Cycle stops	---
EBE	Inconsistency between safety relay and sensing circuit	Main board defective, defective wiring	Machine drains and cycle stops (with door unlocked)	OFF/reset
EBF	Sensing circuit on safety system defective (input voltage on microprocessor remains at 0 or 5 V).	Main board defective	Machine drains and cycle stops (with door unlocked)	OFF/reset
EC1	Solenoid valve inoperative but flow meter operating	Main board defective, Solenoid valve defective	Cycle stops with door locked (after 5 attempts).	OFF/reset
EC2	Signal from turbidity sensor out of limits	Turbidity sensor defective, Main board defective, Wiring defective	-----	Start/reset
EC3	Signal from weight sensor out of limits	Weight sensor defective, Main board defective, Wiring defective	---	Start/reset
EF1	Drain filter clogged (drain cycle too long)	Drain tube clogged/kinked/placed too high; Drain filter dirty/clogged.	Warning is displayed at end of cycle (relative LED is lit)	---
EF2	Too much detergent (too much foam during drain cycles)	Too much detergent used; Drain tube clogged/kinked; Drain filter dirty/clogged.	Warning is displayed at end of cycle (relative LED is lit)	---
EF3	“Water Control” system tripped	Water leaks onto base frame; water control system defective.	Machine drains and cycle stops	OFF/reset
EF4	Water fill pressure too low, no signal from flow meter and solenoid valve is open	Tap closed, water pressure too low	-----	Reset

2.16 Burning on the circuit board EWM1000plus

In case of burning on the main circuit board, check that the problem is not caused by another electrical component (short-circuits, poor insulation, water leakage). Refer to the figures below in order to identify the component that might have caused the burning according to the position of the burned area.

The circuit board shown below is the version with the greatest number of components: other boards may not feature all these components.

3 ENV 06

3.1 Access to the diagnostic cycle

3.1.1 All version

1. Switch off the appliance.
2. Press and hold down the **START/PAUSE** button and the nearest **OPTION** button simultaneously (as represented in figure).
3. Holding down both buttons, switch the appliance on by turning the programme selector **one position clockwise**.
4. Continue to hold down the buttons until the LEDs begin to flash (at least 2 seconds).
5. To exit the diagnostic system, switch **off**, switch **on** and switch **off** again the appliance.

3.1.2 INPUT version

1. Switch off the appliance.
2. Press and hold down **START/PAUSE** button and the nearest **option button** (as represented in figure).
3. Holding down both buttons, switch the appliance on by pushing button **ON/OFF**.
4. The test of the display board starts immediately.
5. To exit the diagnostic system, switch **off**, switch **on** and switch **off** again the appliance.

3.1.3 Rapid reading of alarm codes

The last three alarm codes can be displayed even if the programme selector is not in the tenth position (diagnostics) or if the appliance is in normal operating mode (e.g. during the execution of the washing programme):

- Press and hold down **START/PAUSE** and the nearest **option button** (as to enter the **DIAGNOSTICS**), for at least two seconds: the LEDs initially switch off, and then display the flashing sequence indicating the last alarm.
- To display the previous alarms press the left button of the **START/PAUSE** button sequentially.
- To return to the last alarm, press the **START/PAUSE** button.
- The alarm sequence continues as long as the two buttons are held down.
- While the alarms are displayed, the appliance continues to perform the cycle or, if in the programme selection phase, maintains the previously-selected options in memory.

3.2 Cancelling the last alarm

It is good practice to cancel the last alarm:

- after reading the alarm code, to check whether the alarm re-occurs during diagnostics;
- after repairing the appliance, to check whether it re-occurs during testing.

1. Select diagnostics mode.
2. Turn the programme selector (version with knob) to the **tenth** position or push button P2 till to switch on the LED N°10 (alarm reading).
3. Push simultaneously the **START/PAUSE** button and the nearest **option button** (as represented in figure).
4. Hold down the buttons till the LEDs stop to flash the LCD display shows “E00” (at least 5 seconds).

With this operation all the memorised alarms are deleted

1. Select diagnostic mode, turn the selector to the **tenth** position.
2. Press the buttons simultaneously (as represented in figure).
3. Hold down the buttons till the LCD display shows “Deleted memories” (at least 5 seconds).

3.3 Phases of the diagnostic cycle

Irrespective of the type of PCB and the configuration of the programme selector it is possible, after entering diagnostic mode, turning the programme selector **clockwise or pushing the buttons P1 or P2** (INPUT version), to perform diagnostics on the operation of the various components and to read the alarms. All the alarms are enabled during the diagnostic cycle.

Selector position		Components actioned	Operating conditions	Function checked	LCD	
1		INPUT 	- All the LEDs and symbols light in sequence. - When a button is pressed, the corresponding LED or symbol light.	Always activated	Operation of the user interface	All symbols are activated in sequence, the backlight lights up and then switches off.
2		INPUT 	- Door interlock - Wash solenoid	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through washing compartment	Displays the water level in tub
3		INPUT 	- Door interlock - Pre-wash solenoid	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through pre-wash compartment (bleach)	Displays the water level in tub
4		INPUT 	- Door interlock - Pre-wash and wash solenoids	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through conditioner compartment	Displays the water level in tub
5		INPUT 	- Door interlock - Bleach/stains solenoids	Door locked Water level below anti-flooding level Maximum time 5 minutes	Water ducted through conditioner/stains compartments	Displays the water level in tub
6		INPUT 	- Door interlock - Wash solenoid if the level of water in the tub does not cover the heater - Heating element - Recirculation pump	Door locked Water level above the heater Maximum time 10 minutes or up to 90°C (*)	Heating Recirculation	Wash water temperature
7		INPUT 	- Door interlock - Wash solenoid if the level of water in the tub does not cover the heater - Motor (55 rpm clockwise, 55 rpm counter-clockwise, 250 rpm impulse)	Door locked Water level above the heater	Check for leaks from the tub	Displays the drum speed (the real value divided by ten)
8		INPUT 	- Door interlock - Drain pump - Motor up to 650 rpm then at maximum spin speed (**)	Door locked Water level lower than anti-boiling level for spinning	Drain and spin; control of congruence in closure of level pressure switches	Displays the drum speed (the real value divided by ten)
9		INPUT 	- Door interlock - Drain pump - Motor fan - Condensation solenoid valve - Drying heating element	Door locked Water level lower than anti-boiling level	Drying	Displays the air temperature

10		<p>INPUT</p> 	- Reading/Cancellation of the last alarm	-----	-----	
----	---	--	--	-------	-------	--

- (*) In most cases, this time is sufficient to check the heating. However, the time can be increased by repeating the phase without draining the water: pass for a moment to a different phase of the diagnostic cycle and then back to the heating control phase (if the temperature is higher than 80°C, heating does not take place).
- (**) The check at the maximum speed occurs without control of the FUCS and no clothes have to be inserted inside the appliance.

3.4 Alarm displaying

3.4.1 AEG Version:

The alarm is displayed by a repeated flashing sequence of the LED placed above the button START / PAUSE with yellow and red light (0,5 seconds on, 0,5 seconds off with a 2,5 second pause between the sequences).

- LED indicator START / PAUSE with yellow light → indicates the first digit of the alarm code (family).
- LED indicator START / PAUSE with red light → indicates the second digit of the alarm code (internal number of the family).

These two LEDs are featured in all models.

3.4.2 Other versions:

The alarm is displayed by a repeated flashing sequence of the START / PAUSE button with red and green light (0,5 seconds on, 0,5 seconds off with a 2,5 second pause between the sequences).

- LED indicator START / PAUSE with red light → indicates the first digit of the alarm code (family)
- LED indicator START / PAUSE with green light → indicates the second digit of the alarm code (internal number of the family)

These two LEDs are featured in all models.

Notes:

- The first letter of the alarm code “E” (Error) is not displayed, since this letter is common to all alarm codes.
- The alarm code “families” are shown in hexadecimal; in other words:
 - **A** is represented by **10** flashes
 - **B** is represented by **11** flashes
 - ...
 - **F** is represented by **15** flashes
- Configuration errors are shown by the flashing of all the LEDs, placed inside or above the button START/PAUSE.

3.4.3 Examples of alarm display

Example: Alarm E43 (problems with the door interlock Triac) will display the following:

- the sequence of four flashes of the START / PAUSE button with red light (version AEG LED yellow light), indicates the first number **E4**₃;
- the sequence of three flashes of the START / PAUSE button with green light (version AEG LED red light), indicates the second number **E4**₃;

Button/LED - START / PAUSE red/yellow light				Button/LED - START / PAUSE red/green light			
ON/OFF	On/Off (Ver. AEG)	Time (Sec.)	Value	ON/OFF	On/Off (Ver. AEG)	Time (Sec.)	Value
		0.5	1			0.5	1
		0.5				0.5	
		0.5	2			0.5	2
		0.5				0.5	
		0.5	3			0.5	3
		0.5				0.5	
		0.5	4			2.5	Pause
		0.5					
		1.5	Pause				

3.4.4 Operation of alarms during diagnostics

All alarms are enabled during the components diagnostic phase.

3.5 Table of alarms codes ENV06

Alarm	Possible fault	Action/machine status	Reset	Alarm
E00	No alarm			
E11	Difficulties in water fill for washing	Tap closed or water pressure too low; Drain tube improperly positioned; Water fill solenoid valve is faulty; Leaks from water circuit on pressure switch; Pressure switch faulty; Wiring faulty; PCB faulty.	Cycle is paused with door locked.	START/RESET
E12	Difficulties in water fill for drying	Tap closed or water pressure too low; Drain tube improperly positioned; Water fill solenoid valve is faulty; Leaks from water circuit on pressure switch; Pressure switch faulty; Wiring faulty; PCB faulty.	Cycle is paused with door locked.	START/RESET
E13	Water leakage	Drain hose incorrectly positioned; mains pressure insufficient; water fill solenoid faulty; leakage/blockage of pressure switch hydraulic circuit; pressure switch faulty.	Cycle is paused with door locked.	START/RESET
E21	Difficulties in draining for washing	Drain tube kinked/clogged/improperly positioned; Drain filter clogged/dirty; Drain pump faulty; Pressure switch faulty; Wiring faulty; PCB faulty.	Cycle is paused (after 2 attempts).	START/RESET
E22	Difficulties in draining for drying	Drain tube kinked/clogged/improperly positioned; Drain filter clogged/dirty; Drain pump faulty; Pressure switch faulty; Wiring faulty; PCB faulty.	Cycle is paused.	START/RESET
E23	Drain pump triac faulty	Drain pump faulty; Wiring faulty; PCB faulty.	Safety drain cycle - Cycle stops with door unlocked.	RESET
E24	Fault in "sensing" circuit of drain pump triac (wrong input signal to microprocessor)	PCB faulty.	Safety drain cycle - Cycle stops with door unlocked.	RESET
E31	Electronic pressure switch circuit faulty (frequency of pressure switch signal out of limits)	Electronic pressure switch; Wiring; PCB faulty.	Cycle blocked with door closed.	RESET
E32	Incorrect calibration of electronic pressure switch (The electronic pressure switch generates a signal with instable frequency during the drain phase)	Drain tube kinked/clogged/improperly positioned; Drain filter clogged/dirty; Drain pump faulty; Leaks from water circuit on pressure switch; Pressure switch; Wiring faulty; PCB faulty.	Cycle is paused.	START/RESET
E35	Water overflow	Water fill solenoid faulty; Leaks from water circuit on pressure switch; pressure switch faulty; wiring faulty; PCB faulty.	Cycle blocked. Safety drain cycle. Drain pump always in operation (5 minutes on, 5 minutes off etc.).	RESET
E38	Pressure chamber blocked (water level does not vary for at least 30 sec. during drum rotation)	Motor drive belt broken; Hydraulic circuit pressure switch clogged.	Heating phase skipped.	ON/OFF RESET
E3A	Heating elem. relay sensing faulty (input signal to microprocessor always 0V or 5V)	PCB faulty.	Cycle blocked with door closed.	RESET
E41	Door open (after 15 sec.)	Door interlock faulty; wiring faulty; PCB faulty.	Cycle paused.	START/RESET
E42	Problems of door closure	Door interlock faulty; wiring faulty; PCB faulty.	Cycle paused.	START/RESET
E43	Interlock power supply triac faulty	Door interlock faulty; wiring faulty; PCB faulty.	(Safety drain cycle) Cycle blocked.	ON/OFF RESET

ENV06 EWM11xx EWM21xx EWM25xx/35xx

Alarm	Possible fault	Action/machine status	Reset	Alarm
E44	Door interlock sensing circuit triac faulty	PCB faulty.	(Safety drain cycle) Cycle blocked.	ON/OFF RESET
E45	Door interlock sensing circuit triac faulty (wrong input signal to microprocessor)	PCB faulty.	(Safety drain cycle) Cycle blocked.	ON/OFF RESET
E52	No signal from motor tachometric generator	Motor faulty; wiring faulty; PCB faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E57	Inverter is drawing too much current (>15A)	Motor-Inverter wiring faulty; Inverter board faulty, Motor faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E58	Inverter is drawing too much current (>4,5A)	Motor abnormal operation (overloaded); Motor-Inverter wiring faulty; Motor faulty; Inverter board faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E59	No signal from tachometric generator for three seconds	Motor-Inverter wiring faulty; Inverter board faulty, Motor faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E5A	Overheating for heat dissipator for Inverter	Overheating caused by continuous operation or ambient conditions (let appliance cool down); Inverter board faulty. NTC open (on the Inverter board).	Cycle blocked, door locked (after 5 attempts).	RESET
E5H	Input voltage is lower than 175V	Wiring faulty; Inverter board faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E5C	Input voltage is too high	Input voltage is too high (measure the masters voltage); Inverter board faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E5d	Data transfer error between Inverter and main board	Line interference; Wiring faulty; Main board or Inverter faulty.	-----	RESET
E5E	Wrong communication between main board and Inverter	Main board-Inverter wiring faulty; Inverter board faulty; Main board faulty.	Cycle blocked (after 5 attempts).	ON/OFF
E5F	Inverter board does not start the motor	Wiring faulty; Inverter board faulty; Main board faulty.	Cycle blocked, door locked (after 5 attempts).	RESET
E61	Insufficient heating during washing	NTC sensor faulty; heating element faulty; wiring faulty; PCB faulty.	The heating phase is skipped.	START/RESET
E62	Overheating during washing (temperature higher than 88°C for a time higher than 5 min.)	NTC sensor faulty; heating element faulty; wiring faulty; PCB faulty.	Safety drain cycle – Cycle stopped with door open.	RESET
E66	Heating element power relay faulty (incongruence between sensing and relay)	PCB faulty.	Safety drain cycle – Cycle stopped with door open.	RESET
E68	Current dispersion to earth (value of mains voltage different from main value)	Current dispersion between between heating element and earth.	Cycle blocked with door open.	RESET
E69	Heating element interrupted	Wiring faulty; Heating element for washing interrupted (thermofuse open).	-----	START/RESET
E71	Washing NTC sensor faulty (short-circuited or open)	Wiring faulty; Washing NTC sensor faulty; PCB faulty.	The heating phase is skipped.	START/RESET
E72	Drying condenser NTC sensor faulty (voltage value out of limits, sensor short-circuited or open)	Wiring faulty; Drying NTC sensor (condenser) badly positioned or faulty; WD board faulty.	The drying heating phase is skipped.	START/RESET
E73	Drying duct NTC sensor faulty (voltage value out of limits, sensor short-circuited or open)	Wiring faulty; Drying NTC sensor (duct) badly positioned or faulty; WD board faulty.	The drying heating phase is skipped.	START/RESET
E74	Washing NTC sensor badly positioned	Wiring faulty; Washing NTC sensor badly positioned; NTC sensor faulty; PCB faulty.	The heating phase is skipped.	START/RESET

ENV06 EWM11xx EWM21xx EWM25xx/35xx

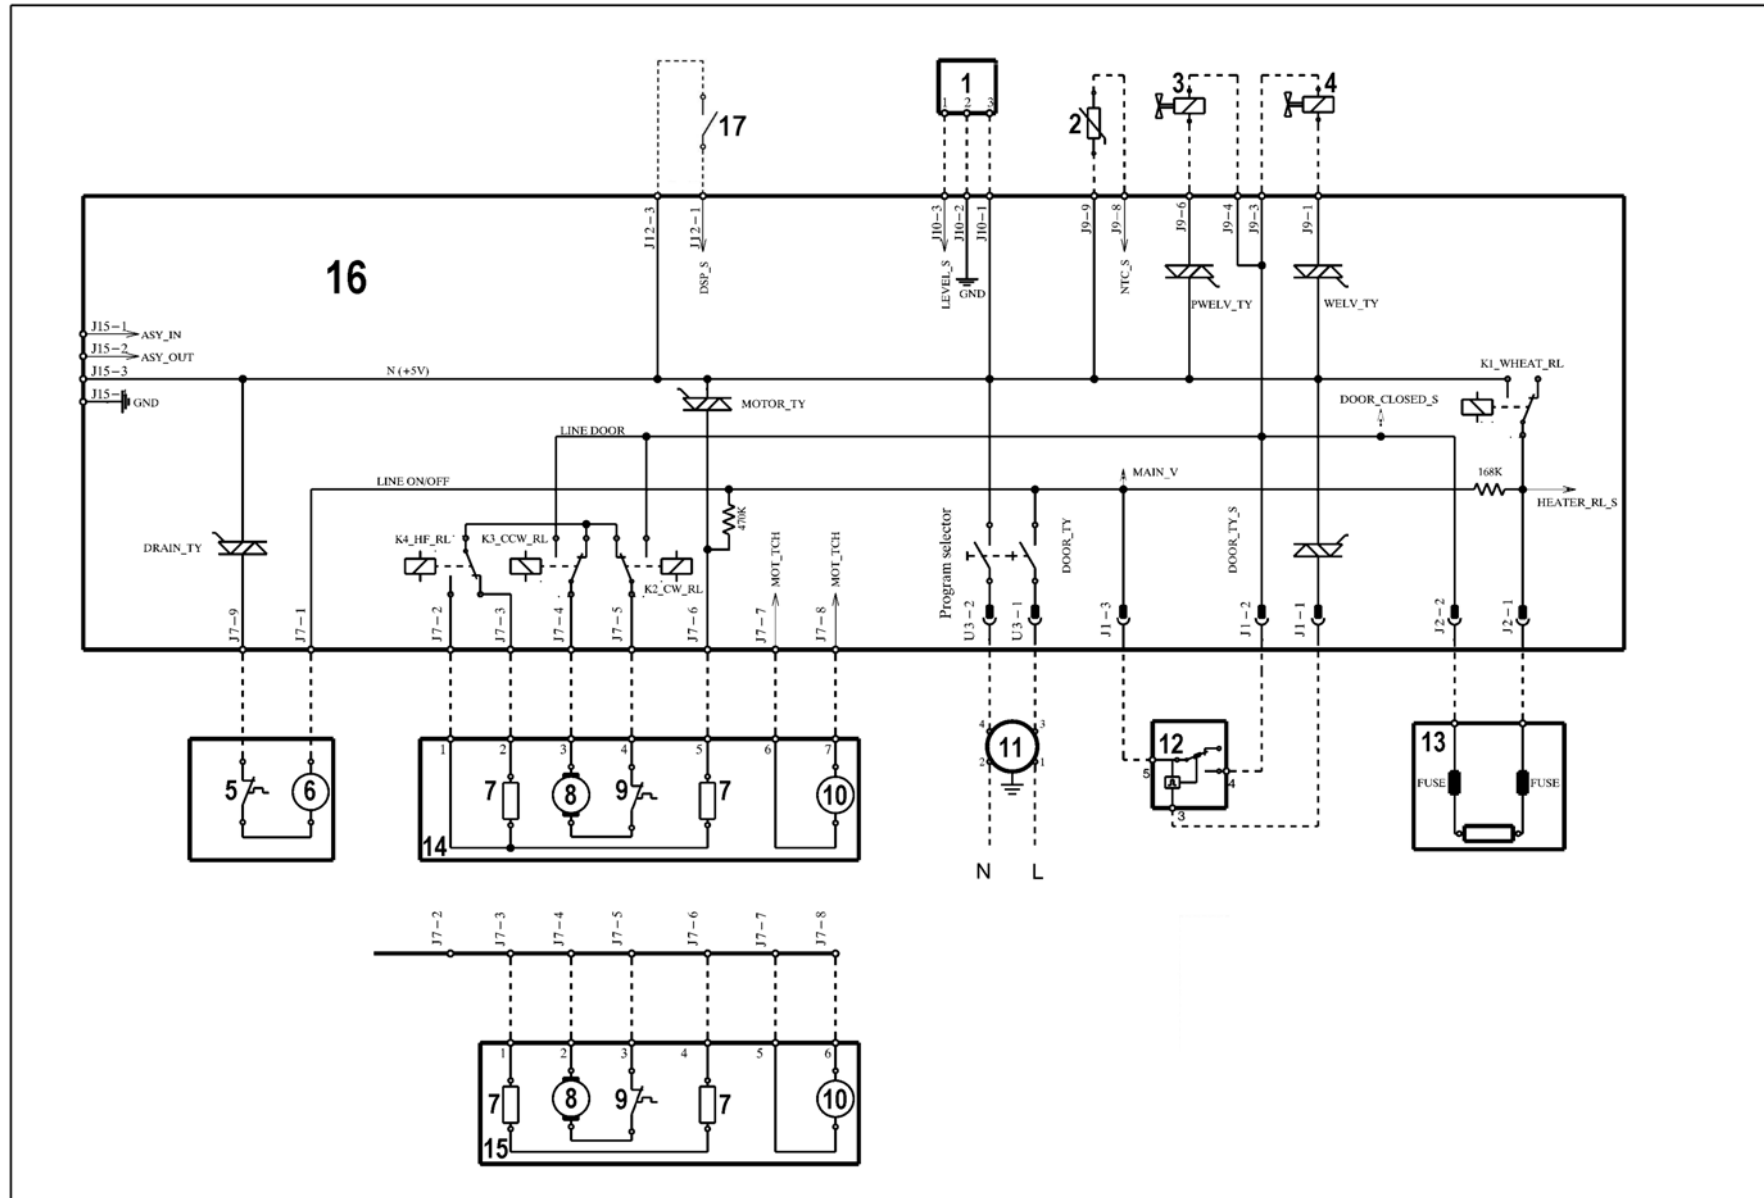

Alarm	Possible fault	Action/machine status	Reset	Alarm
E82	Error in selector reset position	PCB faulty (Wrong configuration data).	-----	RESET
E83	Error in selector reading	PCB faulty (Wrong configuration data).	Cycle cancelled.	START/RESET
E91	Communication error between PCB and display board	Wiring faulty; Control/display board faulty; PCB faulty.	-----	RESET
E92	Communication incongruence between main PCB- display board (versions not compatible)	Wrong control/display board; Wrong PCB (do not correspond to the model).	Cycle interrupted.	OFF/ON
E93	Incorrect configuration of appliance	PCB faulty; (Incorrect configuration data).	Cycle interrupted.	OFF/ON
E94	Incorrect configuration of washing cycle	PCB faulty; (Incorrect configuration data).	Cycle interrupted.	OFF/ON
E95	Communication error between microprocessor and EEPROM	PCB faulty.	Cycle interrupted.	RESET
E97	Incongruence between programme selector and cycle configuration	Faulty PCB (Wrong configuration data).	Cycle interrupted.	RESET
E98	Communication error between main board - Inverter	Incompatibility between main board and Inverter.	Cycle interrupted.	OFF/ON
E9H	Communication error between microprocessor and FLASH memory	Display board.	-----	OFF/ON RESET
E9C	Machine configuration error	Display board.	-----	OFF/ON RESET
E9d	Clock faulty	Display board.	-----	OFF/ON RESET
E9F	Communication error between PCB and remote devices	Wiring between PCB and Inverter faulty; PCB faulty; Inverter faulty.	Cycle interrupted.	OFF/ON
EA1	Drum positioning (DSP) faulty	Motor belt broken; Wiring faulty; PCB faulty; DSP sensor faulty.	Positioning phase skipped.	ON/OFF RESET
EA6	DSP door opening faulty	Motor belt broken; Wiring faulty; Drum cover open. Motor faulty; PCB faulty.	Cycle paused.	ON/OFF RESET
EC1	Solenoid valve blocked with flowmeter working	Wiring faulty; Solenoid valve faulty/blocked, PCB faulty.	Cycle blocked with door closed. Drain pump always works (5 min., then it stops for 5 min. ecc.).	RESET
EC3	Problems with Weight sensor (no signal or out of limits)	Wiring faulty; Weight sensor faulty; PCB faulty.	-----	START/RESET
Ed1	Data communication error between WD board and PCB	Wiring faulty between PCB and WD board; WD board faulty; PCB faulty.	Cycle interrupted.	OFF/ON
Ed2	Drying heating element relay 1 faulty	Wiring faulty between WD board and thermostats; thermostats faulty; WD board faulty, PCB faulty.	Cycle blocked with door open.	RESET
Ed3	Drying heating element relay 2 faulty	Wiring faulty between WD board and thermostats; thermostats faulty; WD board faulty, PCB faulty.	Cycle blocked with door open.	RESET
Ed4	Relay which commutates power between washing heating element and drying (in the WD board)	Wiring faulty; WD board faulty; PCB faulty.	Cycle blocked with door open.	RESET
Ed6	No communication between PCB and display board (INPUT)	Wiring faulty between PCB and programme display board; PCB faulty.	-----	OFF/ON

Alarm	Possible fault	Action/machine status	Reset	Alarm
EF1	Drain filter blocked (drain phase too long)	Drain tube blocked/kinked/too high; Drain filter dirty/blocked.	Warning displayed at the end of cycle (specific LED).	START/RESET
EF2	Excessive detergent dosing (excessive foam during draining)	Excessive detergent dosing; drain tube kinked/blocked; Drain filter dirty/blocked.	Warning displayed after 5 attempts or by the specific LED.	RESET
EF3	Aqua control intervention	Water leaks onto base frame; water control system defective.	Water drain.	ON/OFF RESET
EF4	Water fill pressure low, no signal of flowmeter and solenoid valve open	Tap closed; water fill pressure low.	-----	RESET
EF5	Unbalanced load	Final spin phases skipped.	-----	RESET
EF6	Reset	-----	No action to be performed, if continues replace the PCB.	-----
EH1	Frequency power of appliance out of limits	Power supply problems (incorrect / disturbance); PCB faulty.	Wait for frequency nominal conditions.	OFF/ON
EH2	Voltage too high	Power supply problems (incorrect / disturbance); PCB faulty.	Wait for frequency nominal conditions.	OFF/ON
EH3	Voltage too low	Power supply problems (incorrect / disturbance); PCB faulty.	Wait for frequency nominal conditions.	OFF/ON
EHE	Incongruence between safety relay (in the PCB) and the safety "sensing" circuit	Wiring faulty; PCB faulty.	Safety drain cycle – Cycle stopped with door open.	RESET
EHF	Safety "sensing" circuit faulty (input voltage to microprocessor wrong)	PCB faulty.	Safety drain cycle – Cycle stopped with door open.	RESET

3.5.1 Notes concerning certain alarm codes

- Configuration alarms E93:** If this alarm is generated (when the appliance is switched on), operation of the appliance is blocked, the LEDs placed above or inside the START/PAUSE button start to flash displaying the complete codification (family plus alarm), the display shows the alarm code on condition that the configuration part of the display is ok.
 The diagnostic procedure cannot be accessed; the only option is to switch the appliance OFF.
- Configuration alarm E94:** all LEDs placed above or inside the START/PAUSE button start to flash displaying the complete codification (family plus alarm) and the code is displayed.
 It is not possible to enter the diagnostics or to use the mode "rapid displaying of the alarm".
- Alarms EH1(Eb1)-EH2(Eb2)-EH3(Eb3):** In the event of problems with the mains power supply, the appliance remains in alarm mode until the mains frequency or voltage are restored to the correct value or the appliance is switched off (programme selector on "0"). The family of alarm "b or H" only is displayed if the problem occurs during the normal operation of the appliance, while the family plus the alarm are displayed if the problem occurs at the switching on, through the flashing of the LEDs placed above or inside the START/PAUSE button. At the same time the code is represented also in the display.
 It is not possible to enter the diagnostics or to use the mode "rapid displaying of the alarm": the complete alarm can be read only when the abnormal situation has terminated.
- Alarms E51- E52:** During the diagnostic test, all the alarms are displayed. Normally, when the programme selector is turned from one test phase to another, the appliance exits the alarm condition and performs the phase selected. This does not take place in the case of alarms E51 (power triac on motor short-circuited) and E52 (no signal from the tachometric generator on the motor): in these cases, the only option to exit the alarm condition is to switch the appliance OFF by turning the selector to position "0" (reset) or pushing the ON/OFF button (INPUT styling).

3.8 Burning on the circuit board EWM1100

In case of burning on the main circuit board, check that the problem is not caused by another electrical component (short-circuits, poor insulation, water leakage). Refer to the figures below in order to identify the component that might have caused the burning according to the position of the burned area.

The circuit board shown below is the version with the greatest number of components: other boards may not feature all these components.

3.23 Burning on the circuit board WD

In case of burning on the main circuit board, check that the problem is not caused by another electrical component (short-circuits, poor insulation, water leakage). Refer to the figures below in order to identify the component that might have caused the burning according to the position of the burned area.

The circuit board shown below is the version with the greatest number of components: other boards may not feature all these components.

The image shows two views of a green printed circuit board (PCB). The left view shows the top side with various components including four Omron GSLE-1-CF relays (labeled 5 and 6), two white connectors (labeled 1, 2, 3, 4), and several resistors and capacitors. The right view shows the bottom side with numerous surface-mount components, including several NTC sensors (labeled 7, 8, 9) and other electronic components. Yellow boxes highlight ten specific areas on both sides, numbered 1 through 10, corresponding to the legend below.

<ol style="list-style-type: none"> 1. Power supply 220V~ (Line Door) 2. Washing heating element 3. Thermostat with manual reset 4. Thermostat with automatic reset 5. Drying heating element 1 	<ol style="list-style-type: none"> 6. Drying heating element 2. 7. Fan motor 8. Humidity NTC sensor 9. Drying NTC temperature sensor 10. Communication with main board
