

DOOR LOCK

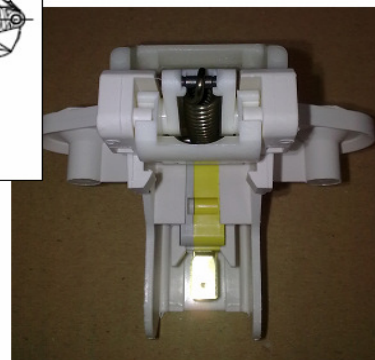

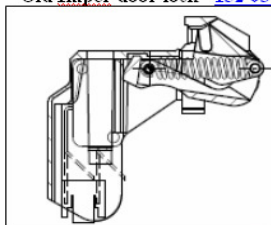

DESCRIPTION:

In the dishwashers produced in PLV Zarow factory will be gradually introduced a new door lock, called „Global Door Lock“, Global since same concept is used also in North America. This introduction has started in 26 week 2009 and will be finished by End of 2010.

New Global Door Lock [1113150104](#)

Old Imper door lock [152 637 7088](#)

The global door lock is being introduced to improve performance compared to the old door lock:

- more robust mechanically
- if door lock has switched to closed position while door is open, the global door lock will still close and recover the situation (“self-healing”)
- Pull-in forces are maintained for a longer distance, therefore allowing bigger tolerance with latch position

The old and new door locks are functionally fully interchangeable, however, due to slight dimensional differences, the new door lock is not yet fitting into all control panels and therefore adjustments to some control panels are being finalized until End of 2010.

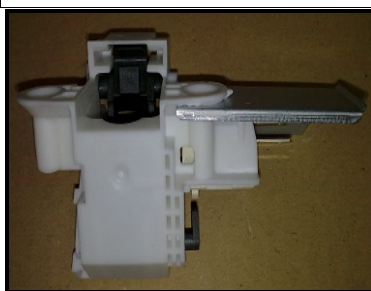

EN	Number of publication	599 72 89-36	Rev. 01	04.2010	SDT-AK
----	-----------------------	--------------	---------	---------	--------

SOLUTION:

Due to superior performance of Global Door Lock, any replacement of door locks should be done with the New Global Door Lock (see PNC list).
