

PULSE WASH DEACTIVATION TO IMPROVE WASHING RESULTS

DESCRIPTION:

Several claims from the Markets are about bad washing results or below expectations. That could be for several reasons depending on both faults and specific working conditions but on Customer misuse also.

SOLUTION:

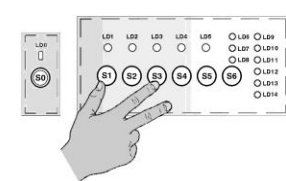

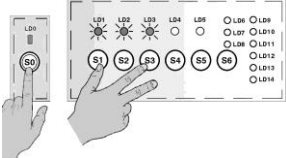

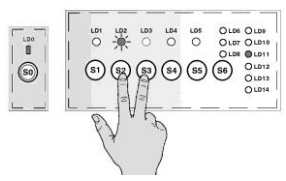

Anyway the aim of this Service Bulletin is to bring at your attention the chance to deactivate the Pulse Wash - through the Service Mode - as possible solution. The Continuous Wash so running in the appliance will improve the washing results.

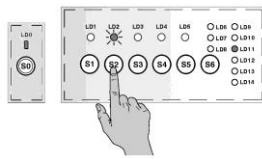

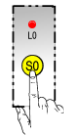

But unfortunately the above cannot be made on all the DIVA2 appliances on the Markets. That because first productions haven't this feature on board in the software and also because some other appliances, produced after w36/2011, has the chance to deactivate Pulse Wash.

SERVICE INSTRUCTIONS:

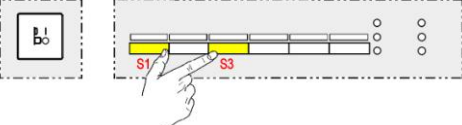

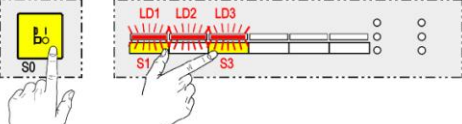

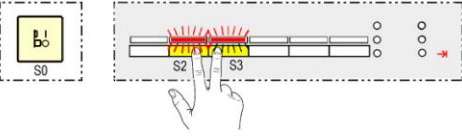

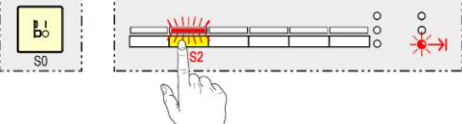

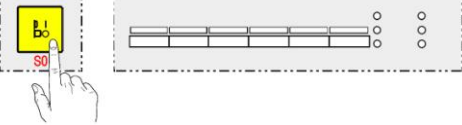

Please refer to the following examples in case you are going to deactivate the Pulse Wash, depending on which electronic platform your dishwasher belongs to. Further will be included from next revision.

EDW1100:

<p>1. Switch off the appliance, press buttons S1-S3 simultaneously.</p>	
<p>2. Press button S0 to switch the appliance on, <u>holding buttons S1-S3 down</u>, till the LEDs LD1, LD2, LD3 start to flash (about 4 sec.)</p>	
<p>3. Press buttons S2-S3 simultaneously till LD2 starts flashing:</p> <p>The End of cycle LED indicates the status of the function:</p> <ul style="list-style-type: none"> • If the end of cycle LED is switched off, the continuous washing system is used. • If the end of cycle LED is lit, the pulse washing system is used.
