AFTER THE DOOR IS CLOSED STEAM OVEN APOLLO SWITCHED NOT ON OR DURING THE OPERATION OFF

FAULT DESCRIPTION:

In steam ovens Apollo, after the door is closed, the oven will not switch on or during operation switch off.

POSSIBLE CAUSE:

The cause of the error can consist in the following items or in the combination of all.

- Door light switch code **387 89 70-01 / 5** from serial no. **216xxxxx** with a changed set point. Consequently, the device later shutdown.

- Door hinge closes incomplete or the clamping force is too low.

- The gasket may not stick out. If it stick out it must be returned to the end position.

CHECK:

Open the door to approximately 15 degrees and fall automatically by Soft closing. The time for this process will be between 2 and 5 sec. Furthermore, you have to check the locking force with a paper strip. Particular look at the top left corner. Possibly you can change the left and the right hinge. Maybe this will bring a better condition. Check the seal assembly in the top left corner especially.

NOTE: The door stands 1-2mm over the control panel. A 1mm over the panel is granted, because since a reduction of the seal is expected as time passed.
