

GALAXY disassembling process

Type: Galaxy vacuum cleaner

Date: November 2009

Tool claim:

1 piece 20 torx screwdriver

1 piece normal screwdriver

Disassembly:

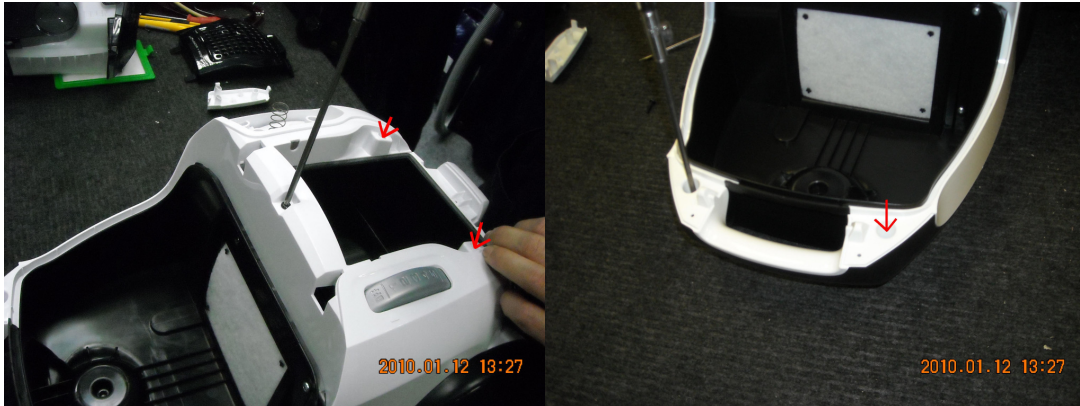

The appliance is easily repairable.

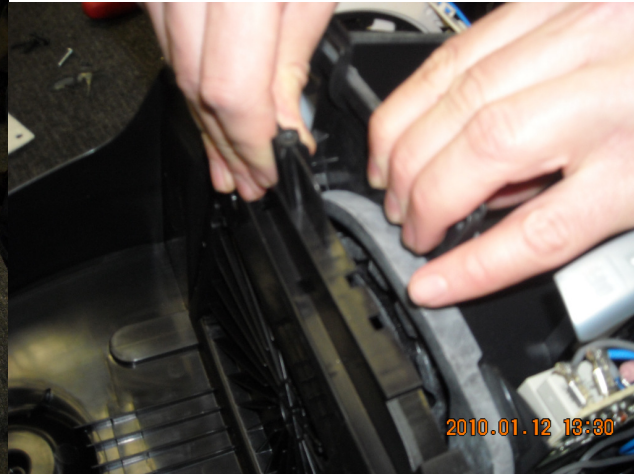

1. You have to remove the grill filter from the back side of the cleaner. After that the dust container cover is easily removable. Open the cover, and push the lock on the both side, and pull the cover in direction of the front side of the cleaner!

2. Remove the 3 screws on the back, and 2 screws on the front side of the cleaner. After that, you can easily lift up the rear cover. After that you can find the Pcb, below the left side of the rear cover.

3. Take out the 4 screws, and remove the motor house!

4. Remove the blower seal, after that, you can take out the motor. The Cord winder is assembled to the right side of the motor house.
