# 1 PURPOSE OF THIS MANUAL

The purpose of this Service Manual is to provide Service Engineers who are already familiar with the repair procedures with information regarding: **4 door French door fridge fully convertible compartment.**

fitted with electronic control systems.

The manual deals with the following topics:

- General characteristics
- Control panel
- Guide to diagnostics
- Technical and functional characteristics
- Access

## 2 SAFETY

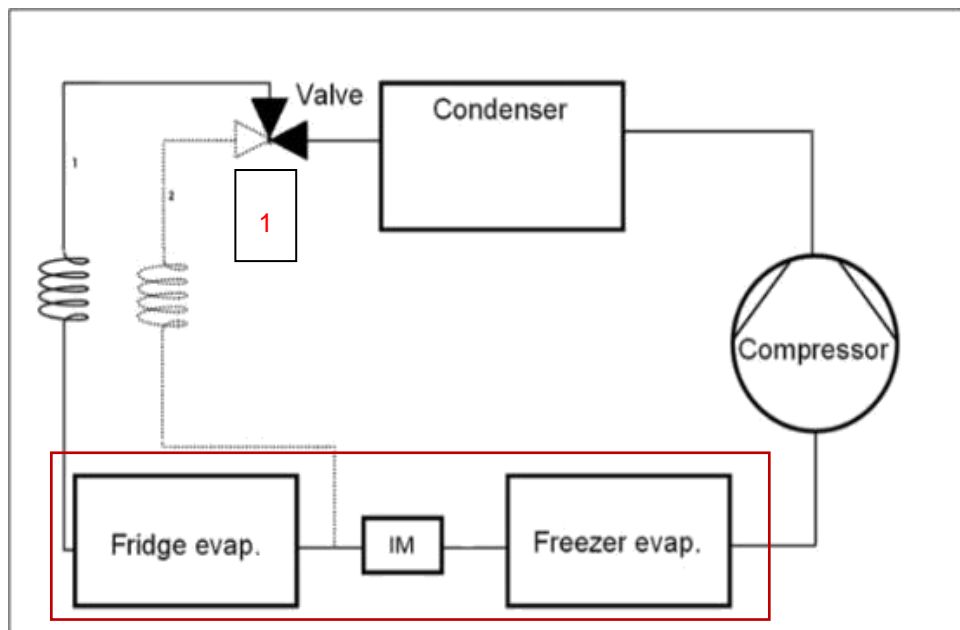

- All the work to be performed inside the appliance requires specific skills and knowledge and may only be carried out by qualified and authorised Service Engineers.
- Before you access internal components, take the plug out of the socket to disconnect the power supply.
- Some of the components in the mechanical part could cause injuries, so wear suitable protection and proceed with caution.

### 3 COOLING CIRCUIT

#### 3.1 Cooling circuit flow

### 3.2 Cooling circuit valve position

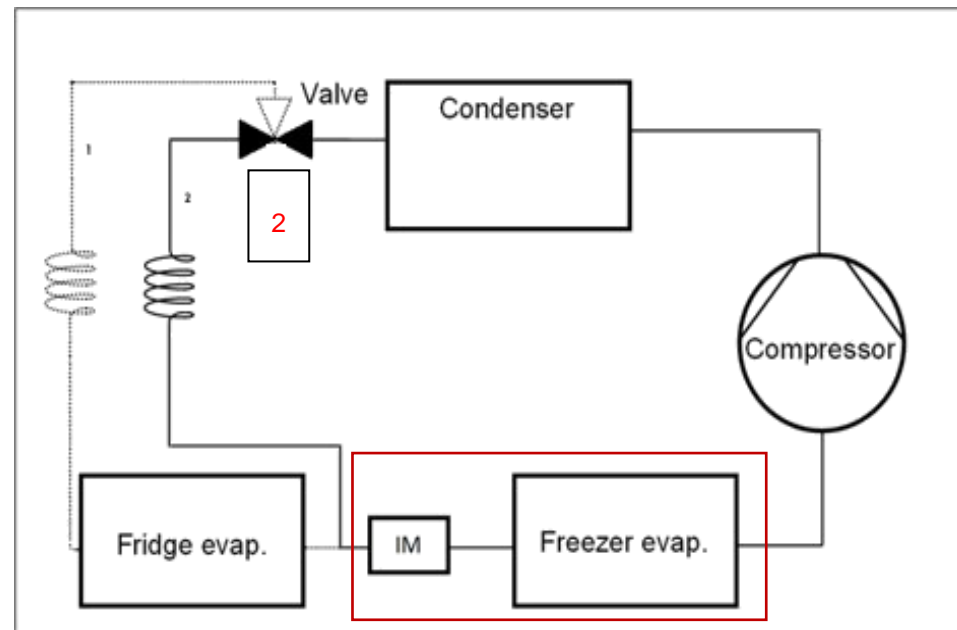

#### VALVE POSITION 1

Valve position used when needs cooling capacity in the fridge.

If IM reaches the target temperature, its fan is set off.

If freezer reaches the target temperature, its fan can also be set off.

#### VALVE POSITION 2

Valve position used when the fridge reached cooling target capacity and IM needs cooling capacity (building ice and/or maintaining the temperature of the ice).

If freezer reaches the target temperature, its fan can be set off

## 4 TOP COVER

### 4.1 Top cover electronic part assembly

Note. Do not replace the ERF2600 and the NIUx board at the same time. Replace first one and start the appliance before replacing the other. This is due to that the boards are serialized.

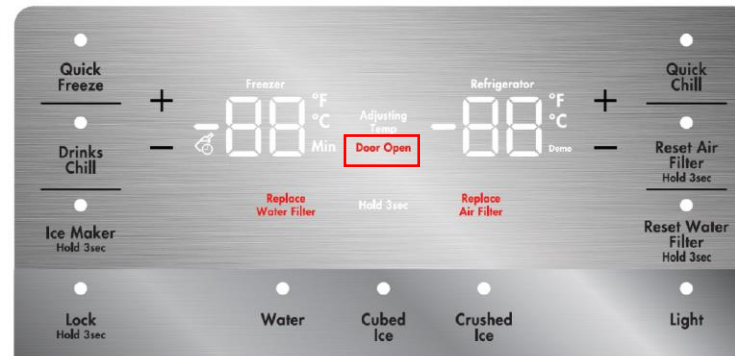

## 5 WATER SUPPLY CIRCUIT

## 6 ALARM & ERRORS

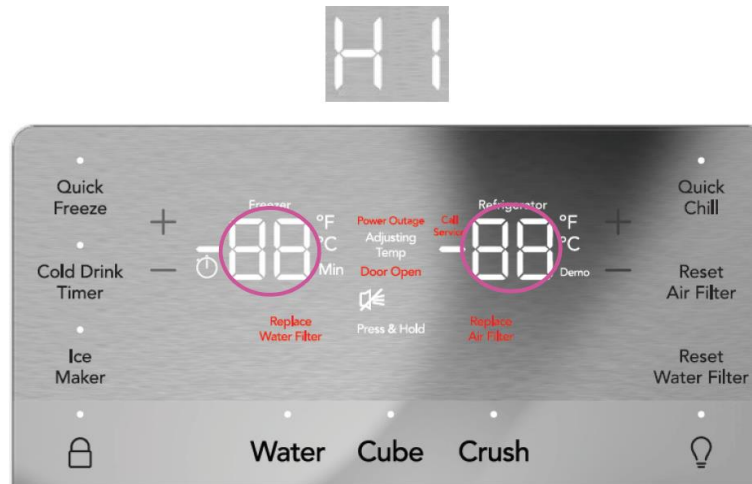

### Door alarm

1. When door is opened,
  - Illuminate LED Door Open in the display
  - If during the sleep mode and door is opened, only show LED Door Open, no need to wake up the display.
2. After 5 mins if the door is still open,
  - Hide all the other display elements.
  - Hide all the LEDs above function keys.
  - LED Door Open stays visible
  - Play tone Alarm once, play tone Alarm every 10 seconds until a key is pressed or door is closed.
3. Touching any key when alarm sounds,
  - LED Door Open stays visible until door is closed.
  - Mute the alarm.
  - Mute the alarm if the alarm is sounding.
  - UI goes back to previous state before door is opened (either sleep mode or wake-up mode).

## High Temperature Alarm “HI”

Display 'HI' on the correspondent compartment display (FF or/and FZ) and blink.

### When power is out and recovered

If the temperature is within the range (FF under 55°F/12°C and FZ under 23°F/-5°C), do not show the alert.

- If the temperature falls outside of the range,
- Display 'HI' in the display of the correspondent cavity (Fridge &/or Freezer) and blink.
- Play tone Alarm every 60 seconds until power is recovered.
- Touch any key to mute the alarm.

### High temp condition occurs without power out or door alert.

1. Play tone alarm, every 10 seconds until the alert is acknowledgment.
2. On touching any key or opening the door,
  - Mute the alarm for 45minutes.
  - Show set temperature settings.

## 6.1 Errors

| Error                      | Indication |    | Errors Verification                                 |
|----------------------------|------------|----|---|
| Freezer Temperature Sensor | Er         | t1 | Open/Shorted  |
| Freezer Defrost Sensor     | Er         | t2 | Open/Shorted  |
| Fridge Temperature Sensor  | Er         | t3 | Open/Shorted  |
| Fridge Defrost Sensor      | Er         | t4 | Open/Shorted  |
| VCZ Temperature Sensor     | Er         | t5 | Open/Shorted  |
| Ice Maker Tray Sensor      | Er         | t6 | Open/Shorted  |
| Communication Error        | Er         | CE | UIs to Main board error after a period of operation |
| Chute Flapper Error        | dl         | SP | Chute Flapper not connected or with error           |

# 7 SENSORS

## 7.1 SENSORS POSSITIONING

Defrost sensor ice maker evap Ice maker temperature sensor.

Fridge Defrost

## 8 MAIN CONTROL BOARD ERF2600

1. Disconnect power and place the refrigerator in a position to access rear side.
2. Remove the five screws on the rear panel cover and remove the cover.
3. Mark and disconnect all wires and release snaps to detach the boards.
4. Do not replace the ERF2600 and the NIUX board at the same time. Replace first one and start the appliance before replacing the other. This is due to that the boards are serialized.

ERF2600 has eight relays and three SSRs power boards, connected mostly to insulated UI.

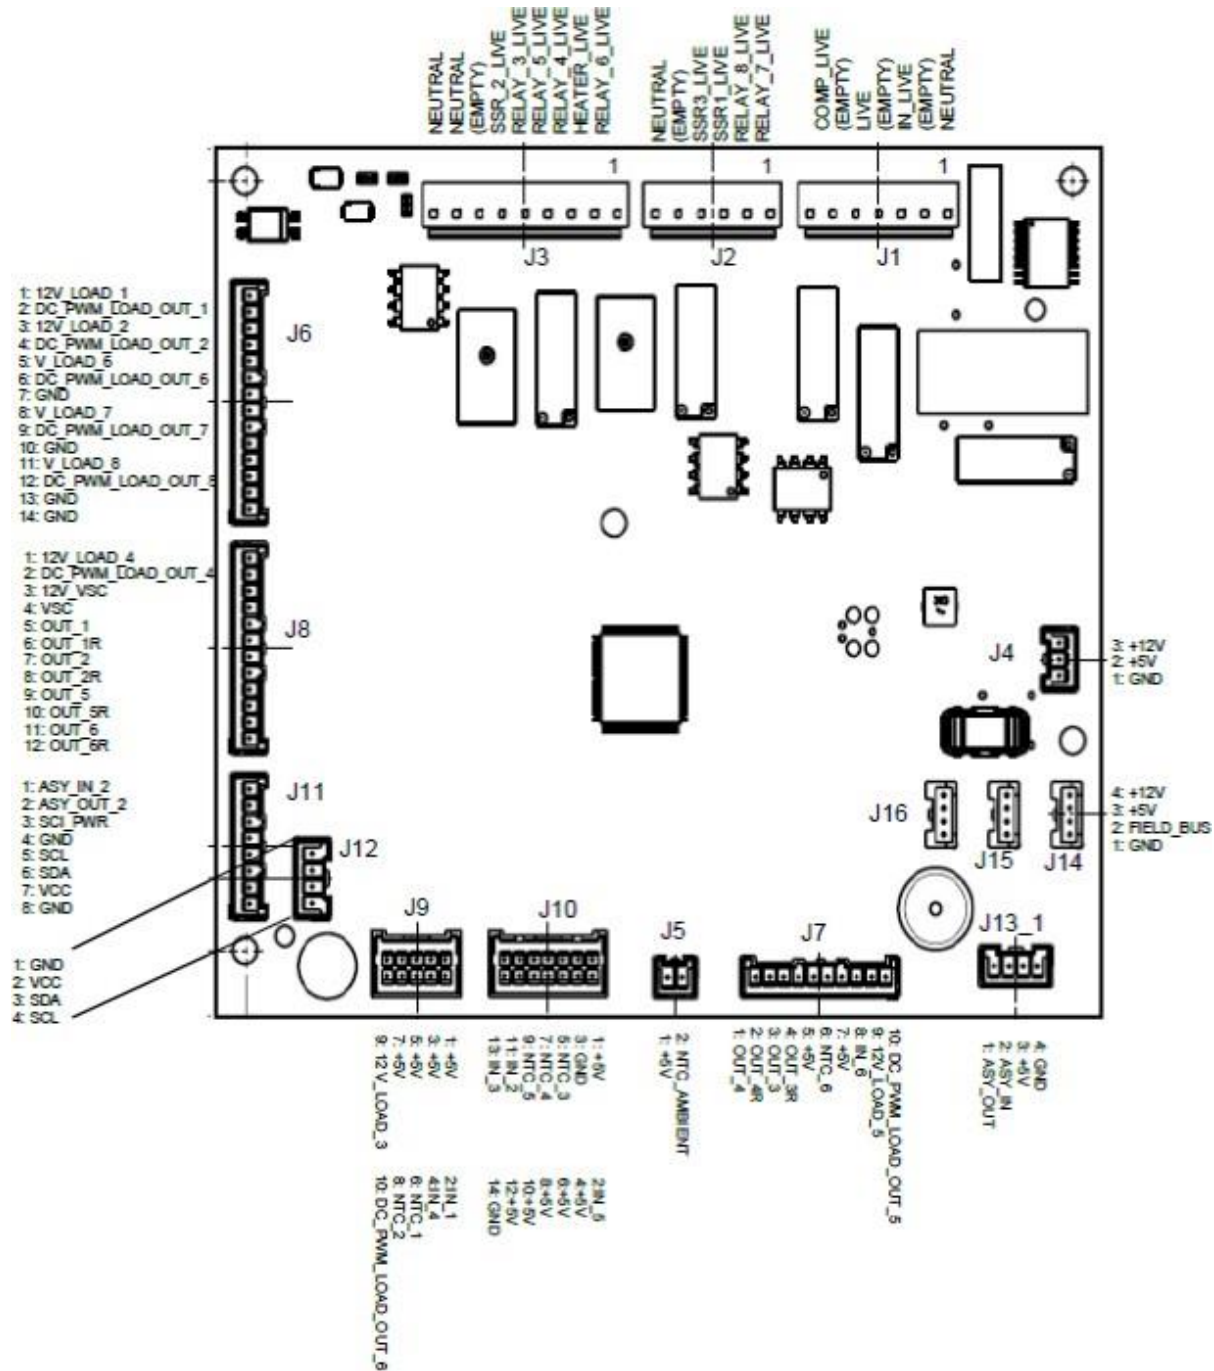

Sidekick connection Power supply

Control board

Filter board

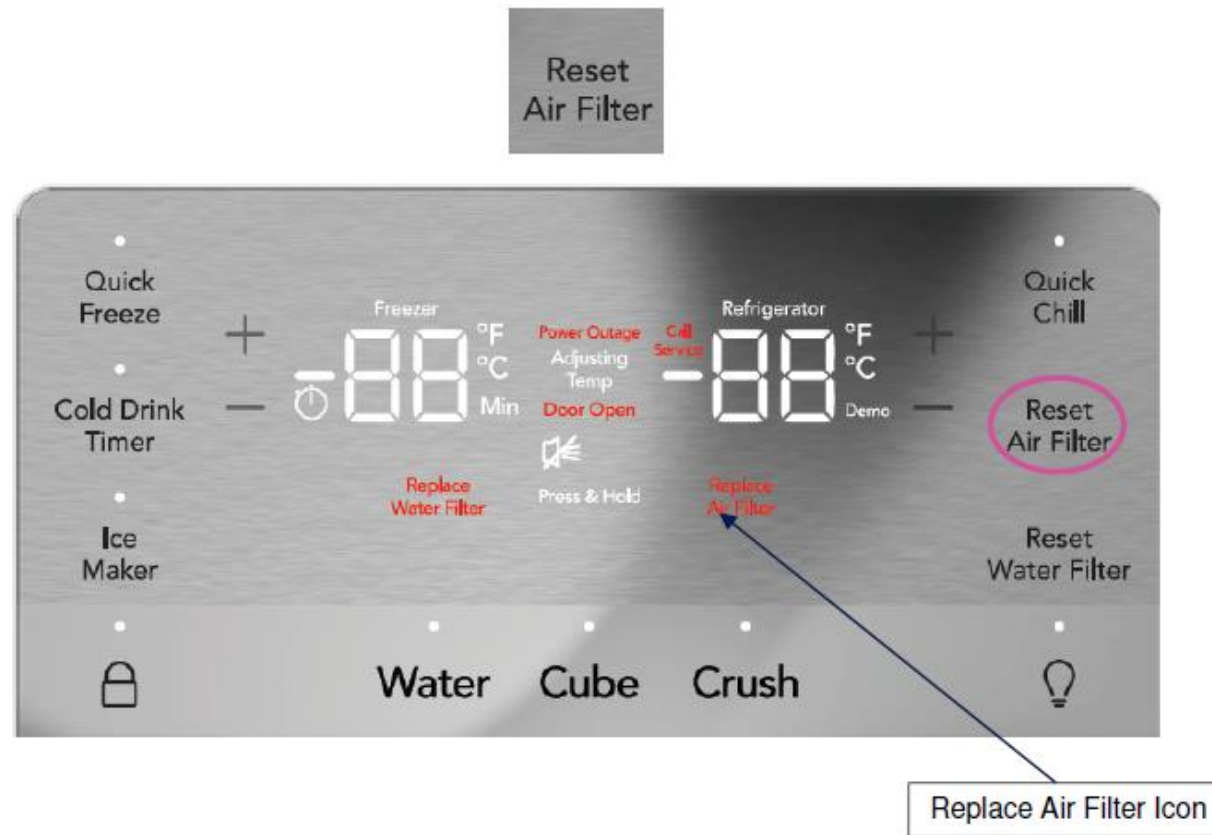

## 9 MODE

### 9.1 RESET AIR FILTER

After 6 months, LED Replace Air Filter turns ON.

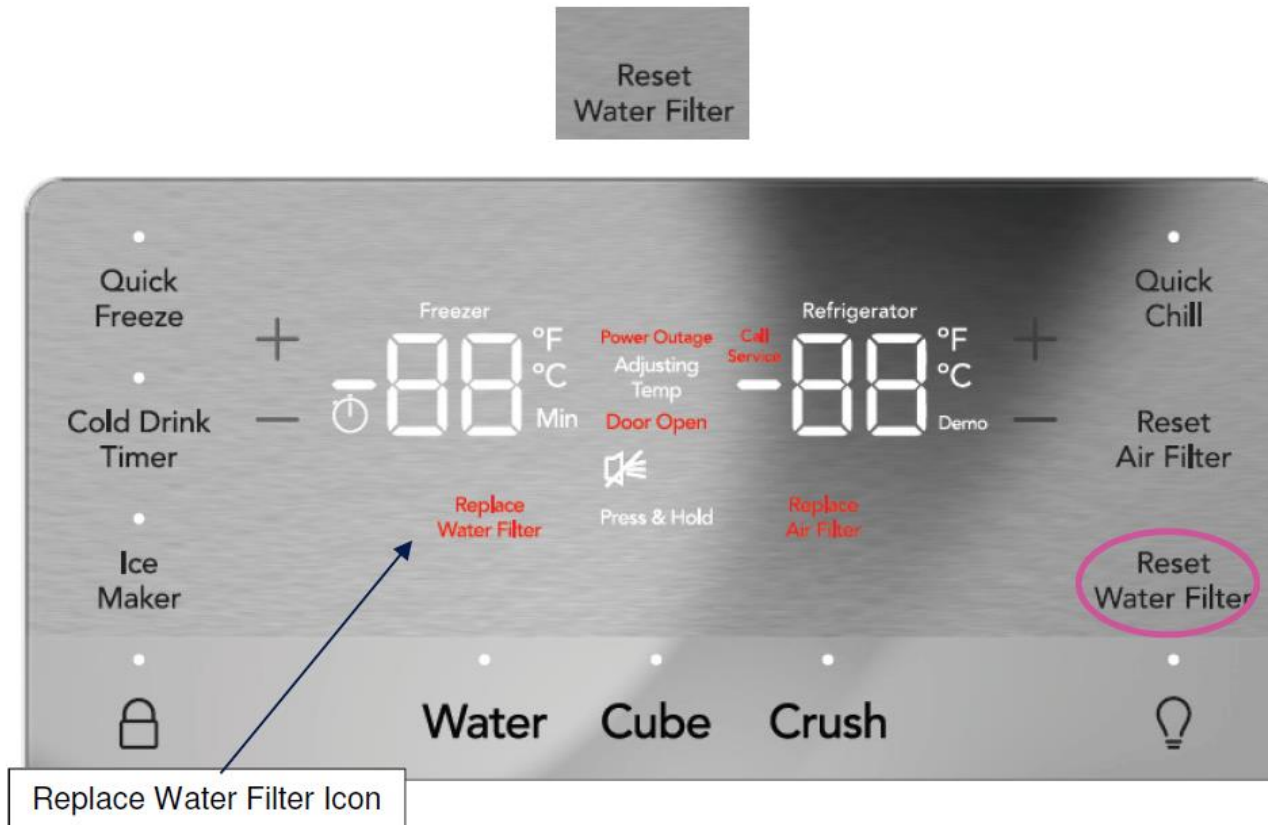

1. To reset the alert, press & hold the Reset Air Filter key for 3 seconds.
2. The new 6-month count will start.

## 9.2 RESET WATER FILTER

After 6 months or after 120 gallons of water dispensed, LED Replace Water Filter turns ON.

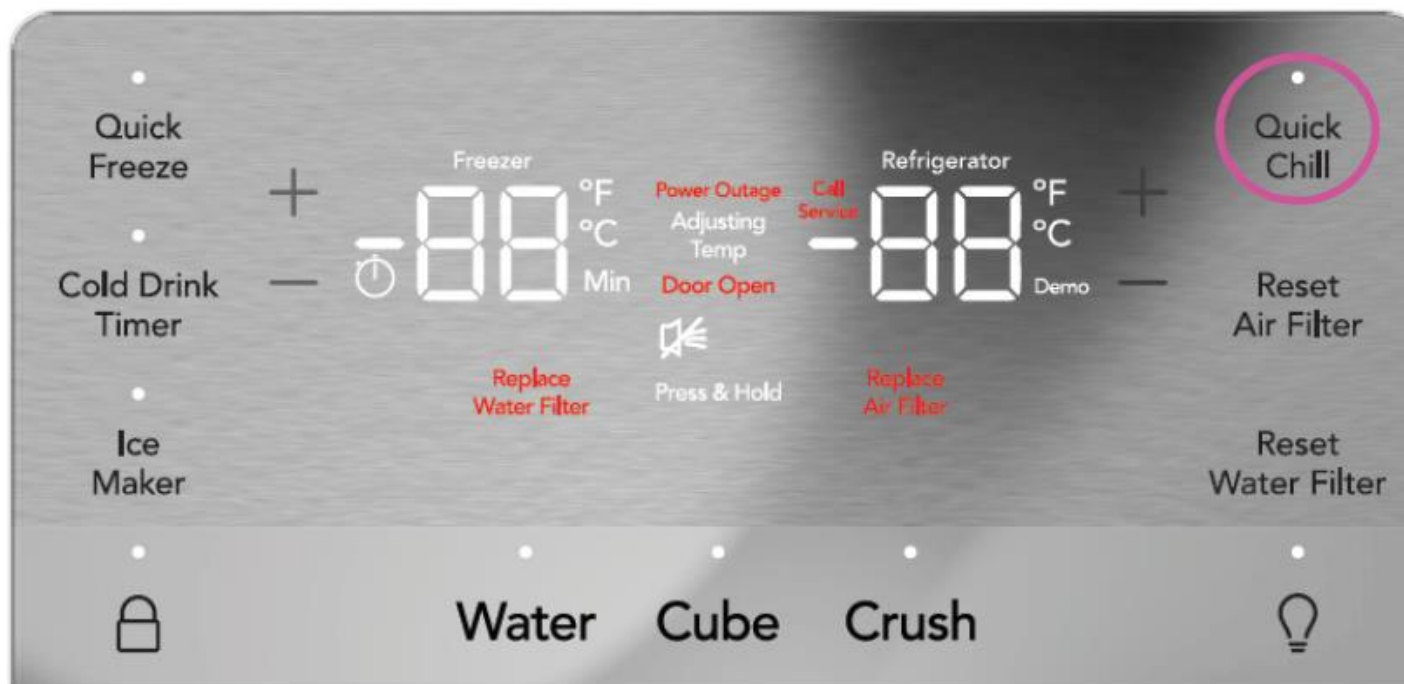

1. To reset the alert, press & hold the Reset Water Filter key for 3 seconds.

### 9.3 QUICK CHILL MODE

To turn on/off press the Quick Chill key

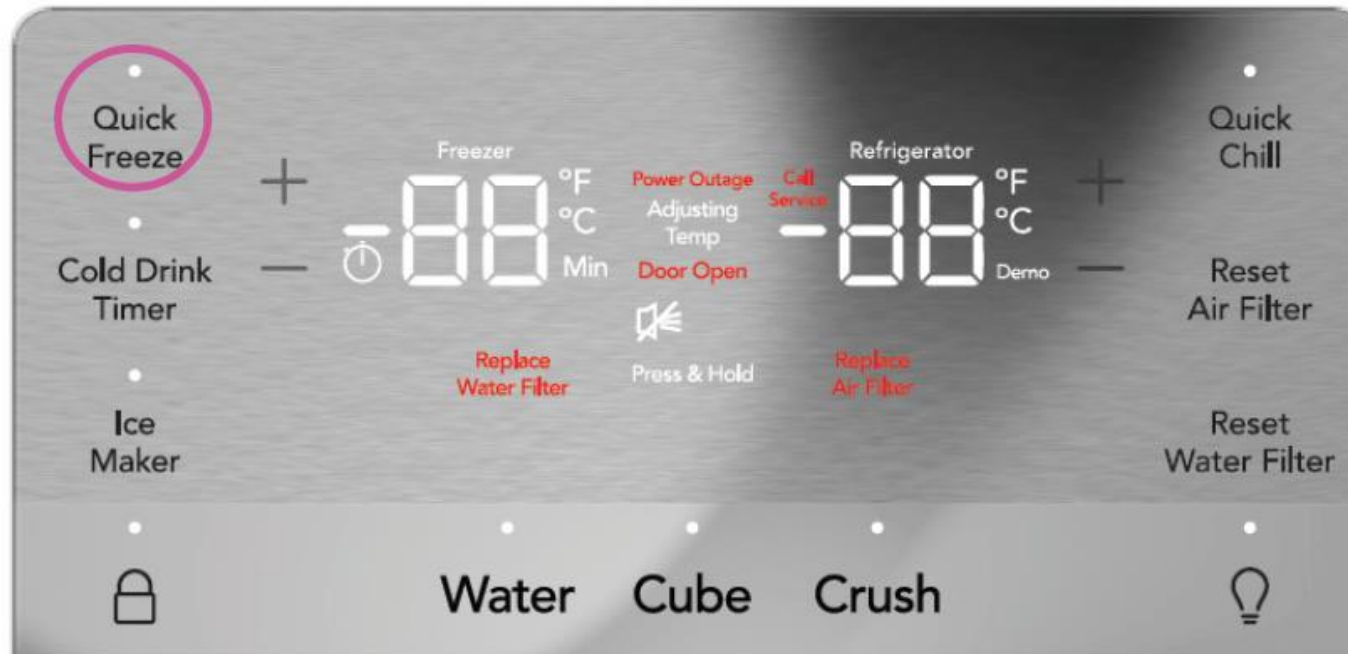

1. The product will respect the Minimum Fridge setup in the function (1°C / 34°F), it means, if the product reach the minimum temperature setup the system will change the valve to do not pass gas into the FF evaporator until reach again the cut in temperature.
2. The compressor will run in the maximum speed according the Compressor flowchart (ERF2600).
3. If the product was running previously a defrost, the product will wait until finish the defrost to start the compressor ON state, but the 6h timer will maintain decreasing;
4. Note: the Refrigerator setup temperature (value displayed) will not change. When Quick
5. Chill ends, the product will adjust back to the Refrigerator setup temperature indicated in
6. the display.
7. 6. IMPORTANT: Quick chill function is a refrigerator function. When the Quick Chill feature is
8. turned ON, it CANNOT freeze fresh food. It runs 6 hours at minimum Fresh Food setup
9. temperature (1°C / 34°F) or manually turned off by user;

## 9.4 QUICK FREEZE MODE

To turn on/off press the Quick Freeze key

1. The product will respect the Minimum Freezer setup in the function (-23°C / -9°F), it means, if the product reaches the minimum temperature setup the compressor will turn OFF until reach again the cut in temperature.
2. The compressor will run in the maximum speed according the Compressor flowchart (ERF2600).
3. If the product was running previously a defrost, the product will wait until finish the defrost to start the compressor ON state, but the 12h timer will maintain decreasing.
4. After 12 hours, the LED above key will turn OFF automatically, (none Tone). It is because the function finished.
5. Note: The Freezer setup temperature feedback (value displayed) will not change. When Quick Freeze Mode ends, the product will adjust back to the Freezer setup temperature indicated in the display.
6. IMPORTANT: Quick freeze is a freezer function. When the Quick Freeze Mode is turned ON, it CANNOT freeze fresh food. Quick Freezer Mode runs 12h to automatically finish the function, or manually turned OFF by user directly in the key.

## 9.5 DRINK CHILL (COLD DRINK TIMER)

If there is no further change to the value for 3 second,

- Blink “normal” the values digits twice, Play tone Confirm.

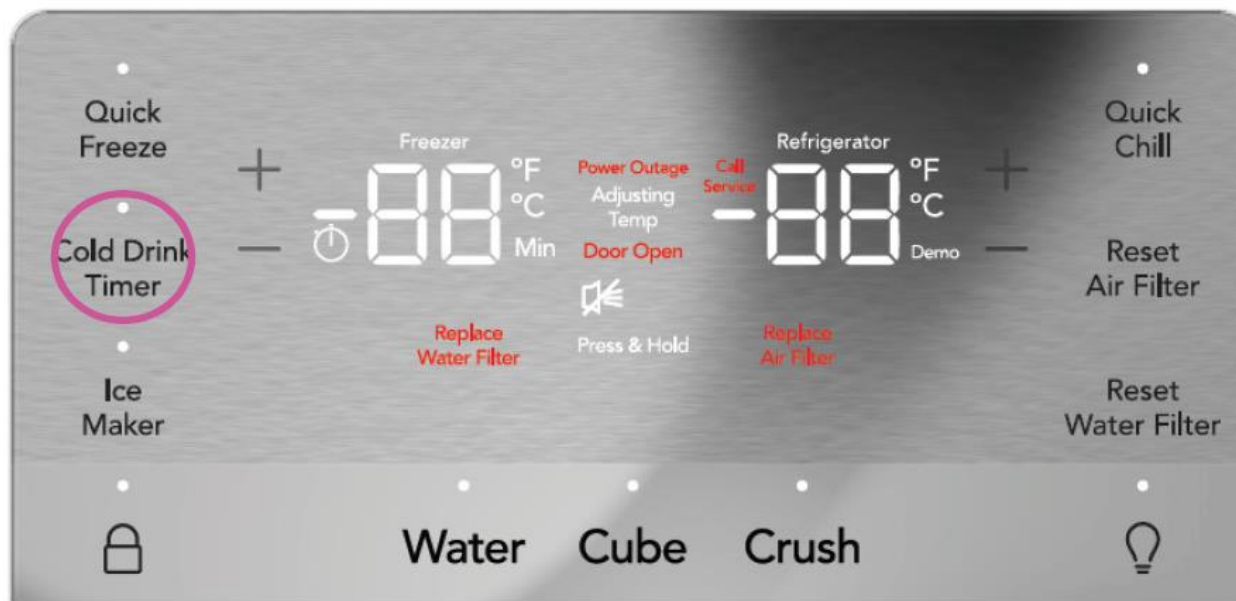

When timer time expires,

- Digits display show '00min' ,Blink “normal” LED Drink Timer above the key, until acknowledged by any keypress

- Play tone EOC for the first time, and then play tone EOC every 10 seconds until acknowledged by any keypress.

Time Range: 20 > 25 > 30 > 35 > 40 > 45 (6 timer options).

As soon as the function is confirmed the product will run the compressor maximum & Freezer fan speed until reach the end of the timer.

## 9.6 DEMO MODE

Pressing and holding + (freezer) and – (refrigerator) for 10 seconds will activate Demonstration mode.

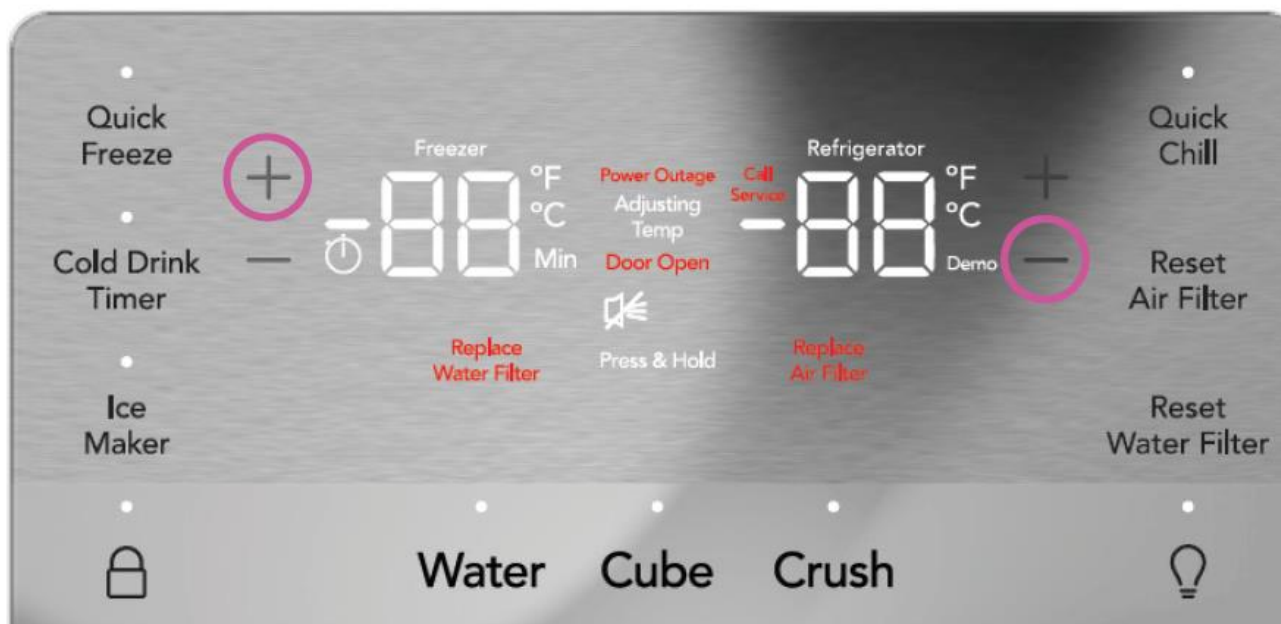

On detection of 10-sec-holding,

- Illuminate Icon “Demo”, Play tone Confirm.

All the Icons/Touches/Display/Lighting will work properly, excepted cooling will not work.

Pressing and holding + (freezer) and – (refrigerator) for 10 seconds again will deactivate Demo mode

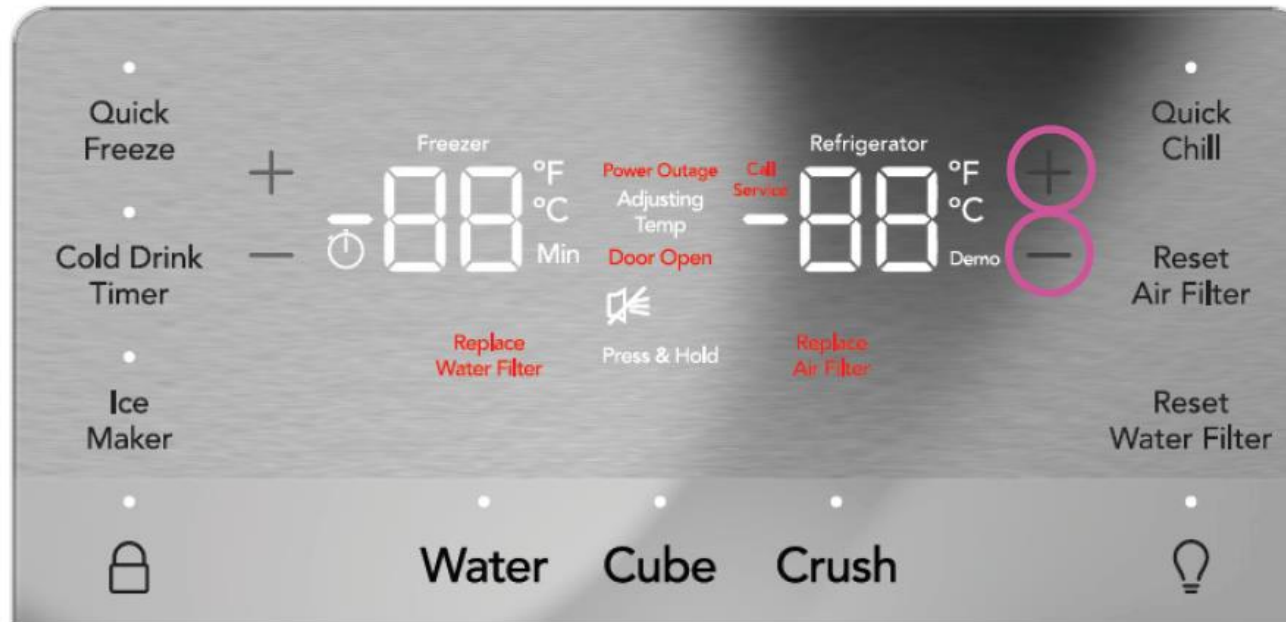

- Illuminate Icon “Demo” removed, Play tone Cancel.

## 9.7 CHANGE TEMPERATURE ENTER IN THE °F/°C

Press and hold for 5 seconds + and - from the refrigerator side.

Will change from Degrees Celsius to Degrees Fahrenheit or Degrees Fahrenheit to Degrees Celsius.

## 9.8 SABBATH MODE

Pressing and holding – (freezer) and + (refrigerator) for 5 seconds will activate Sabbath mode. The digits display show 'Sb' and 'Sb'

- Turn off all the other LEDs ,No sound playing

During the Sabbath mode only the loads that are strictly necessary to the product works normally. It means that Chute/Mullion Heater will be enable to work. Freezer Light/Fridge Light/ VCZ light and Dispenser light are disable during the Sabbath mode (also if the dispenser light is turned ON in the panel before

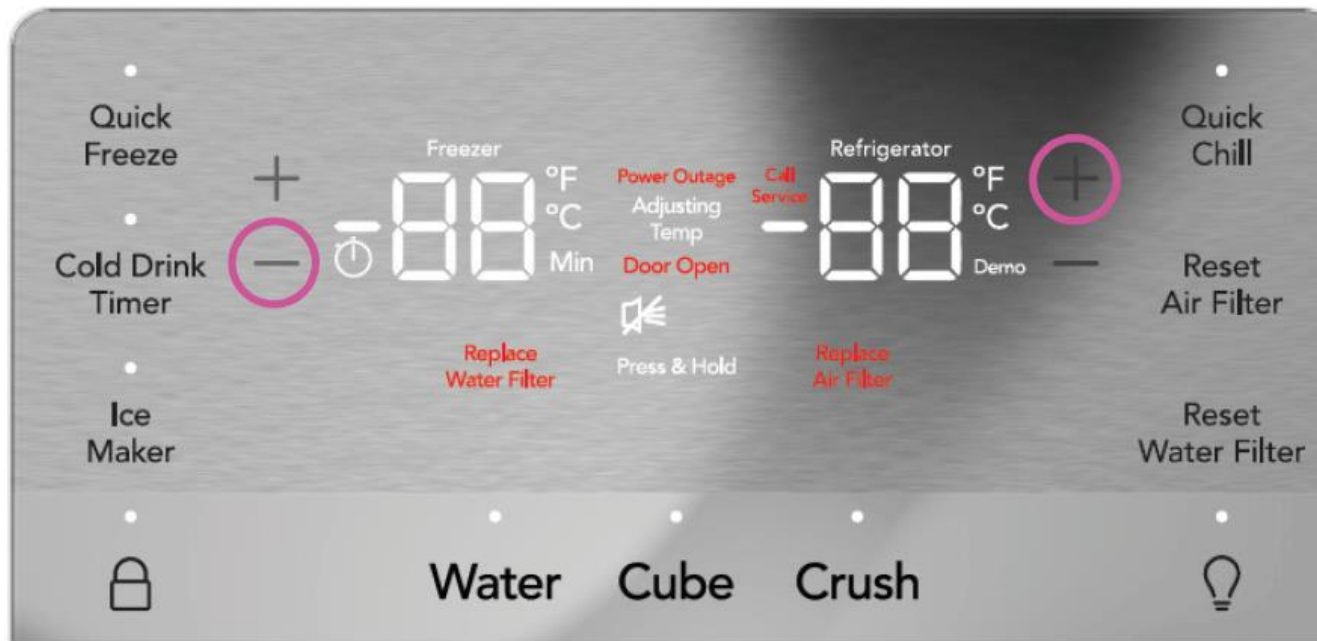

- Alarms are disable, except High Temperature Alarm. If it occurs, the alarm is visualized ondisplay “HI” that overwrite the “Sb” indication.Entering in Sabbath mode)

The sound alarm is automatically mute by timeout (5 minutes). During the Sabbath mode is not possible to acknowledge the alarm.

-The adaptive defrost will be a clock time of 10h

-All dispenser functions are disable

Pressing and holding – (freezer) and + (refrigerator) for 5 seconds again will deactivate Sabbath mode

## 9.9 SLEEP MODE

To turn "Sleep Mode" On/Off, press and hold for 5 seconds 'CRUSH' and 'Light' Key. Play tone 'confirm' Sleep Mode is turned on or off.

Option A: When the Control panel is not active locked mode.

10 seconds of no user interface, the control panel goes into sleep mode,

- Dispense mode selection and light state remains the current state water,cube,Crush and light ON.

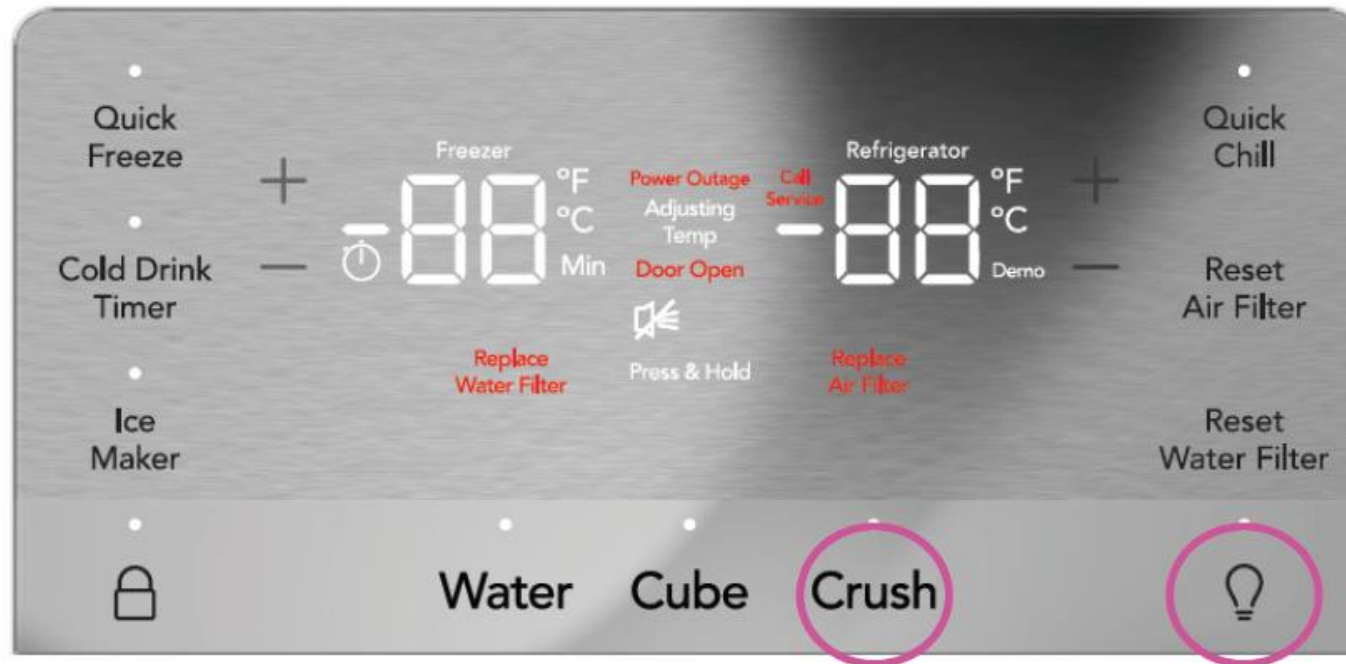

- All other UI elements are off.

- Touching any other key to wake up the UI and show settings.

Option A: When the Control panel is not active locked mode.

When Control panel is locked, then 10 seconds of no user interface, the control panel goes into sleep mode,

- Turn off everything except the lock LED

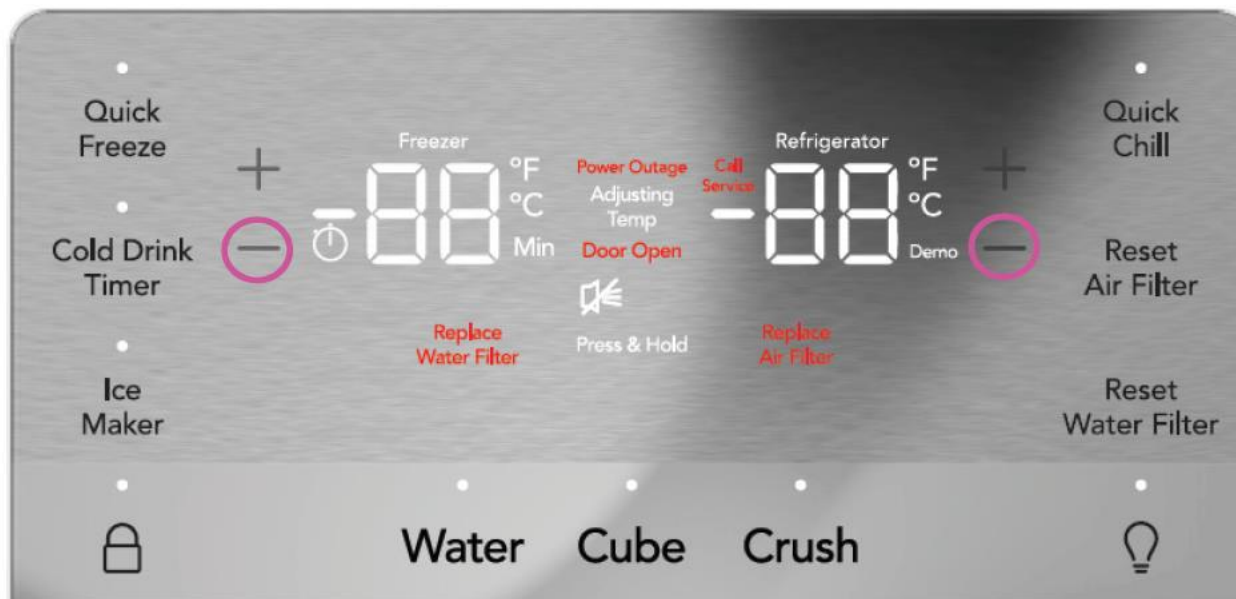

## 9.10 FACTORY DEFAULT MODE

Pressing Refrigerator (-) and (-)Freezer keys (press together for 10 seconds)

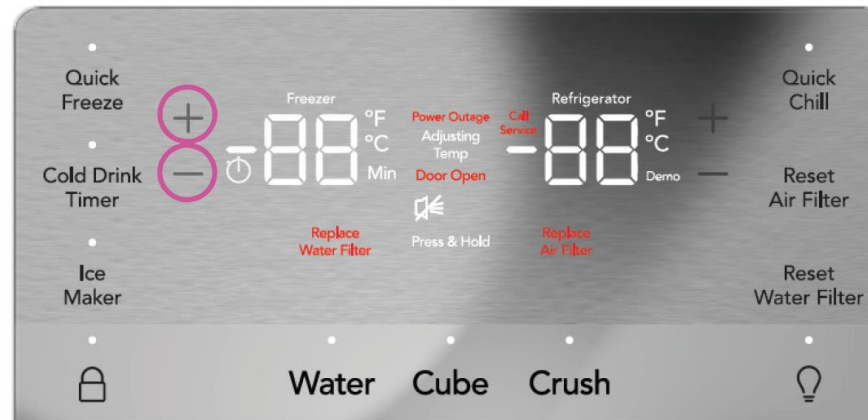

This function will reset all the settings to the factory default settings. It means:

- Set the Freezer temperature to Default (-18°C / 0°F)
- Set the Fridge temperature to Default (4°C / 37°F)
- Ice maker function Default ON
- Dispenser Default Water
- Other functions OFF
- and HI Temp reset to the initial value.

## 10 DIAGNOSTIC MODE

### 10.1 ENTER TO DIAGNOSTIC MODE

Activate service mode:

Press and hold  
**+** (freezer) and  
**-** (freezer) for 10 seconds.

All LEDs of the UI illuminates and a beep confirms that service mode is activated.

Press **+** (refrigerator) icon to progress through the different functions. Press **-** (refrigerator) icon to go back to the previous function.  
Press “**Ice cubes**” icon to change the status of the function.

- Each function is associated with a number indicated on the freezer display.
- Function status is indicated with intermittent time duration on the fridge display.
- See **List of functions in service mode** table below for details

Extra information:

Freezer display: Numbered item.

Refrigerator display: Status of the item, status/value of the extra information, numbered item, status/value of the extra information.

Exit service mode:

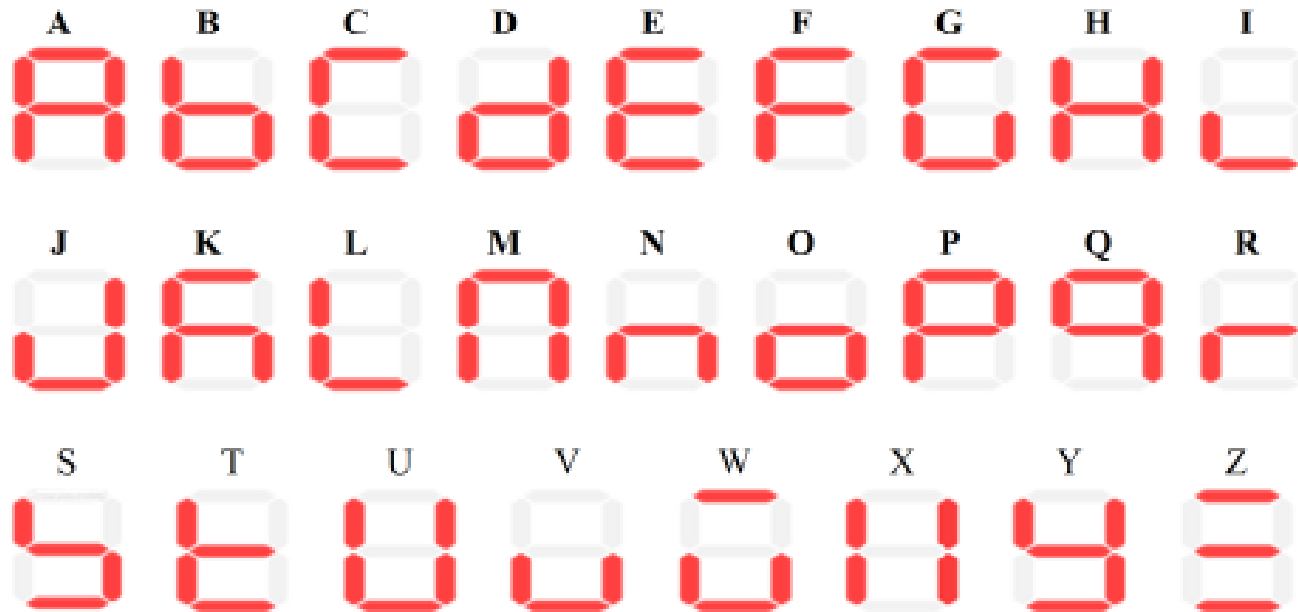

Press and hold freezer **+** and **-** icons for 10 seconds.

## Appendix A. Seven-segment display character representation

Numbers:

Letters:

## 10.2 LIST OF FUNCTIONS IN DIAGNOSTIC MODE

- Freezer Display: N° item
- Refrigerator Display: status of the item, status/value of the extra info, N° item, status/value of the extra info

| N° item | Function test                     | UI action to change the status | Expected behavior  |
|---------|-----------------------------------|--------------------------------|--|
| -       | First screen                      | -                              | LED lights up to display UI.   |
| -       | Second screen                     | -                              | LED turns off.   |
| 2       | Freezer defrost heater            | Press "Ice Cubes"              | <ol style="list-style-type: none"> <li>The freezer evaporator defrost sensor temperature flashes on the display.</li> <li>Watch for temperature increase with the heater on. <ul style="list-style-type: none"> <li>It may take a maximum of 5 minutes for the evaporator to heat up. Maximum 5 minutes "on" or 45°C Freezer Evap Defrost Sensor threshold.</li> </ul> </li> </ol> |
| 8       | Main valve                        | Press "Ice Cubes".             | <ol style="list-style-type: none"> <li>Main valve (faucet) is activated when "on"; stops when "off"</li> </ol>   |
| 11      | Cube/crush solenoid               | Press "Ice Cubes".             | <ol style="list-style-type: none"> <li>Solenoid is activated when "on", deactivated when "off".</li> <li>Do not leave solenoid activated for more than 1 minute; it turns off automatically after 1 minute.</li> </ol>   |
| 53      | Water valve dispense + main valve | Press "Ice Cubes".             | <ol style="list-style-type: none"> <li>Be prepared to collect water at dispenser.</li> <li>Water dispenses when "on"; stops when "off".</li> </ol>   |

|    |                                   |                    |  |
|----|-----------------------------------|--------------------|--|
| 56 | Ice maker water valve+ main valve | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Remove ice tray to collect water into a measuring container to measure the water fill.</li> <li>b. If collecting water into ice tray, first perform test number 50 to empty ice tray.</li> <li>c. Water flows in the tray when "on" and stops when "off"</li> </ul>  |
| 71 | Refrigerator defrost heater       | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Refrigerator Evaporator Defrost Sensor temperature flashes on the display.</li> <li>b. Watch for temperature increase with the heater on.</li> <li>c. It may take a maximum 5 minutes for the evaporator to heat up. Maximum 5 minutes "on" or 45°C Refrigerator Evap Defrost sensor threshold.</li> </ul>   |
| 72 | Ice maker defrost heater          | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Icemaker Evaporator Defrost Sensor temperature flashes on the display.</li> <li>b. Watch for temperature increase with the heater on.</li> <li>c. It may take a maximum 5 minutes for the evaporator to heat up. Maximum 5 minutes "on" or 45°C IM Evap Defrost Sensor threshold.</li> </ul>   |
| 74 | VCZ balance heater                | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Maximum five minutes "on" continuous.</li> </ul>   |
| 79 | Fill tube heater                  | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Maximum five minutes "on" continuous.</li> </ul>   |
| 10 | Auger motor                       | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Refrigerator door must be closed.</li> <li>b. Motor running when "on"; motor stopped when "off"</li> </ul>   |
| 13 | Refrigerator light                | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Refrigerator lights on when "on", off when "off"</li> </ul>  |
| 14 | VCZ light                         | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. VCZ light on when "on", off when "off"</li> </ul>  |
| 15 | Freezer evaporator fan            | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. The freezer evaporator fan runs at three speeds: <ul style="list-style-type: none"> <li>• "On": Fan runs at maximum speed</li> <li>• "Mi": Medium speed</li> <li>• "Off": Stopped</li> </ul> </li> <li>b. "Lc": Rotor condition locked.</li> <li>c. "Ns": PWM signal that provides duty cycle is absent and the fan is "off".</li> <li>d. "Np": 12V signal or GND signal is absent and the fan is "On" or "Mi".</li> </ul> |

|    |                             |                    |  |
|----|-----------------------------|--------------------|--|
| 17 | VCZ fan                     | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. The VCZ fan runs at three speeds: <ul style="list-style-type: none"> <li>a. "On": Fan runs at maximum speed</li> <li>b. "Mi": Medium speed</li> <li>c. "Off": Stopped</li> </ul> </li> </ul>   |
| 18 | Condenser fan               | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. The condenser fan runs at three speeds: <ul style="list-style-type: none"> <li>a. "On": Fan runs at maximum speed</li> <li>b. "Mi": Medium speed</li> <li>c. "Off": Stopped</li> </ul> </li> <li>b. "Lc": Rotor condition locked.</li> <li>c. "Ns": PWM signal that provides duty cycle is absent and the fan is "off".</li> <li>d. "Np": 12V signal or GND signal is absent and the fan is "On" or "Mi".</li> </ul>               |
| 20 | Freezer light               | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Freezer light on when status is "on", and off when "off"</li> </ul>  |
| 38 | VCC compressor              | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Compressor is running at maximum speed when "on", it is stopped at "off".</li> </ul>   |
| 47 | Ice chute heater            | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Chute heater is activated when "on", deactivated when "off".</li> </ul>  |
| 62 | Icemaker evaporator fan     | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Icemaker evaporator fan is activated when "on", deactivated at "off".</li> </ul>   |
| 63 | Flip mullion heater DC      | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. DC flip mullion heater is activated when "on", deactivated at "off".</li> </ul>  |
| 66 | Dispenser light             | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. Dispenser light on when "on", off when "off"</li> </ul>  |
| 70 | Refrigerator evaporator fan | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. The refrigerator evaporator fan runs at three speeds: <ul style="list-style-type: none"> <li>a. "On": Fan runs at maximum speed</li> <li>b. "Mi": Medium speed</li> <li>c. "Off": Stopped</li> </ul> </li> <li>b. "Lc": Rotor condition locked.</li> <li>c. "Ns": PWM signal that provides duty cycle is absent and the fan is "off".</li> <li>d. "Np": 12V signal or GND signal is absent and the fan is "On" or "Mi".</li> </ul> |
| 76 | VCZ damper heater           | Press "Ice Cubes". | <ul style="list-style-type: none"> <li>a. VCZ Damper Heater is activated when "on", deactivated when "off".</li> </ul>   |

|    |   |   |  |
|----|---|---|--|
| 77 | VCZ damper                                | Press "Ice Cubes".  | <ol style="list-style-type: none"> <li>a. Freezer evaporator fan is automatically at maximum speed. <ol style="list-style-type: none"> <li>a. "Op": VCZ damper is open.</li> <li>b. "Cl": VCZ damper is closed.</li> <li>c. "Off": Stopped</li> </ol> </li> <li>b. Check for airflow when the damper is fully open and that there are no air leaks when fully closed.</li> <li>c. "1" blinks during movement of damper.</li> <li>d. If there are errors during movement, the error status of the fan is displayed (LC, Ns, Np) and the status of the damper (Op, Cl).</li> </ol>             |
| 36 | Ice chute door/ ice flapper motor         | Press "Ice Cubes" to change the status of the function and to move the flapper motor. | <ol style="list-style-type: none"> <li>a. "Op": Ice chute door is open.</li> <li>b. "Cl": Flapper motor is closed.</li> <li>c. "1" blinks during movement of flapper motor.</li> <li>d. "Er" in case of failure.</li> <li>e. Opening/closing of the ice chute door are performed recursively for three consecutive times.</li> </ol>   |
| 50 | Icemaker twist tray harvest test          | Press "Ice Cubes" to change the status of the function and to start the rotation.     | <ol style="list-style-type: none"> <li>a. Remove the ice bucket to see the rotation of the ice tray.</li> <li>b. "Go" on the refrigerator display when the tray finds the home position (horizontal position)</li> <li>c. "1" blinks during rotation of the ice tray.</li> <li>d. "Er": In case of failure at the end of the twisting action.</li> </ol>   |
| 78 | Ice maker tray bail arm/ ice level bucket | Press "Ice Cubes".  | <ol style="list-style-type: none"> <li>a. Remove the ice bucket to see the status of the ice tray bail arm.</li> <li>b. Allow bail arm to drop freely. "Em" (empty) when the tray returns to the home position.</li> <li>c. Hold up the bail arm. "Fu" (full) when the tray returns to the home position.</li> <li>d. "1" blinks during rotation of the ice tray.</li> <li>e. "Er" In case of failure at the end of the twisting action.</li> </ol>  |
| 61 | Stepper motor valve                       | Press "Ice Cubes".  | <ol style="list-style-type: none"> <li>a. First Position must be ("open-open") and the compressor starts at maximum speed.</li> <li>b. Going through the steps below, the stepper valve goes to close position, IM/FZ then FF/IM/FZ. It is possible to loop through the four states.</li> <li>c. The display indicates the steps as: <ul style="list-style-type: none"> <li>• "03": Open position</li> <li>• "00": Close position</li> <li>• "01": IM/FZ position</li> <li>• "02": FF/IM/FZ position</li> </ul> </li> <li>d. ### 10.3 SOFTWARE PARAMETERS AND FIRMWARE VERSIONS

After the functional tests, it is possible to view the software parameters and firmware versions of the electronic boards.

Press the + (refrigerator) icon after the functional tests, "--" is display and after this the sequence described below starts. .

The "--" characters are used as a separator.

|    |                                     |   |   |
|----|-------------------------------------|---|---|
| a- | Software Parameters                 | Runs Automatically, scrolling all the digits of the string. | <ul style="list-style-type: none"> <li>a. Displays digits sequence related to the set of parameters that is flashed inside ERF2600 power board;</li> <li>b. It is built of 8 digits. The same digit is displayed simultaneously on the 2 displays (Freezer and Refrigerator). <ul style="list-style-type: none"> <li>• For example: "00499539"</li> </ul> </li> <li>c. Press + icon if you want to skip this visualization and pass to the next record.</li> </ul>              |
| b- | Main Board Firmware Version ERF2600 | Runs Automatically, scrolling all the digits of the string. | <ul style="list-style-type: none"> <li>a. Displays digits sequence related to the ID string or firmware version of ERF2600 power board</li> <li>b. It is built of 8 digits. The same digit is displayed simultaneously on the 2 displays (Freezer and Refrigerator). <ul style="list-style-type: none"> <li>• For example: "JHB10G10"</li> </ul> </li> <li>c. Press + icon if you want to skip this visualization and pass to the next record</li> </ul>                        |

|----|--------------------------------------|---|---|

## 10.4 LIFETIME

After the software parameters and firmware versions, it is possible to view the lifetime of the appliance. This refers to the number of days the appliance has had power, not consecutively.

The maximum value can be 9999 days.

- |  |   |   |

## 10.5 FREE COUNTER

The last section is related to displaying a free counter. It is a one second up-counting timer (0,1,2,3...) and the digit is displayed on the display.

This phase communicates that service mode has come to end. To return to normal mode you have to press and hold + and – icons for 10 seconds or unplug the appliance and plug it again

# 11 REMOVAL & REPLACEMENT OF PARTS

## 11.1 TOP PANEL

Remove the five screws on the top panel to access:

- Auger motor safety switch
- Water hose
- Safety switch auger motor
- Reeds switch internal light.
- NIUx board
- H&T sensor

NIUx

H&T sensor

Water hose  
switch

Auger motor safety switch

Light reed  
switch

Remove the Light reed switch:

Disconnect the wire connector  
of the switches

Open the snaps  
to remove  
the switches.

Remove the Auger safety switch:

Disconnect the wire connector.

Release the snap  
and push out

## 11.2 FLIPPER MULLION PLATE

1. Disconnect power.
2. Remove the screws on the flipper mullion hinge.

3. Hold the flipper mullion and push it upward.
4. Disconnect the wire connector of the flipper mullion.

## 11.3 HUMIDITY CONTROL

1. Disconnect power.
2. Release snap and remove the humidity control cover and detach the humidity control.

## 11.4 FILTERS

Air filter:

Hold the air filter assembly and pull it out.

Air filter

Water filter:

1. Pull the water filter housing towards the front of the cabinet to release the tab, the filter housing drops to reveal the filter.
2. Hold the water filter and rotate counterclockwise to remove the water filter.

Water filter

## 11.5 ICE MAKER AIR HANDLER & EVAPORATOR

### Ice maker:

1. Hold the ice bucket assembly and pull it out.
2. Remove the screw and detach the wiring cover.
3. Disconnect the wire connector of the ice maker.
4. Hold the ice maker and pull it out.

Note: The ice maker fill tube is not replaceable.

### Air handler:

1. Remove the ice maker.
2. On the side of the ice maker, remove the screw cap with a plastic putty knife.
3. Remove the two screws mounting the flip shelf.
4. Take the shelf out.

5. Remove the screw mounting the ice maker housing.
6. Hold the ice maker housing and pull out.

7. Remove four screws mounting air handler.
8. Pull out the defrost thermistor and disconnect the wire.

#### Evaporator:

1. Remove ice maker.
2. Remove air handler.
3. Pull out defrost heater fuse.
4. Cut the welding on inlet and outlet tubes of evaporator.
5. Release snaps and remove the evaporator.

## 11.6 AUGER MOTOR, ICE MAKER FAN & CUBE CURSH SOLENOID

1. Remove ice maker.
2. Remove air handler.
3. Pull out thermal cover on top of the fan assembly.
4. Pull out the fan assembly and disconnect the wire.
5. Remove the two screws mounting the crush solenoid.
6. Pull out the crush solenoid.

7. Disconnect all wires connected to the crush solenoid.
8. Unscrew the auger drive bar.
  - a. Note that it has left-hand threads (turn right to loosen). Hold auger drive bar and rotate clockwise to remove.
9. Remove the foam gasket that covers the top screw.

10. Remove the three screws.
11. Disconnect the wires connected to the motor.
12. Detach the motor.

## 11.7 FRIDGE EVAPORATOR, EVAPORATOR FAN,AIR DUCT,DEFROST SENSOR

1. Disconnect power.
2. Remove the flip-shelf, shelves, crisper drawers, crisper support and air filter.
3. Remove the connector window cover and disconnect all the connectors.
4. Remove the three screws to unfasten the cover of the fridge evaporator.
5. Remove the NTC sensor.
6. Pull the cover from the top to release the tabs.
  - a. **Be sure to grasp the cover right above the air filter location. The back of the air ducting is adhesive backed foam tape. If the cover is pulled from either the right or left, the tape will collapse and attach itself to the air duct causing an air restriction.**

**Adhesive backed foam tape** – make sure to grasp the cover from the top, above the air filter location.

7. Disconnect the wire connector of the fan motor.
8. Remove the sensor on the air duct.

### Fridge evaporator fan:

1. Remove the three screws.
2. Cut the foam tape with a knife.
3. Do not cut more than necessary to remove the fan.
4. Take the fan motor out.
5. Remove the fan housing.
6. Separate the housing by releasing the tabs and detach the fan motor by removing the three screws.

After a fan replacement, use an adhesive tape to hold the original tape in position.

Cut foam tape here.

Release the snap and remove the screws

The defrost thermistor is located on the upper side of the evaporator, on the copper tube leading to the evaporator inlet.

1. Cut the plastic band attached to the thermistor/heater thermal cutoff.
2. Disconnect the wires and detach the thermistor/ heater thermal cutoff.

Note: Do not break the welding of the evaporator if removing the defrost thermistor.

### Fridge evaporator:

1. Separate the defrost thermistor from the evaporator.
2. Cut the welding on inlet and outlet tubes and remove the evaporator

## 11.8 WATER SUPPLY

**Note: Tubes may contain water.**

1. Remove the screws mounting the main water valve.
2. Disconnect the wire connector of the valve.

**Note:** MDR4 has an additional double valve inside the fresh food compartment.

**Inlet tube:**

3. Remove the black locking clip.

4. Hold the valve and press down the white release collar on both sides.

5. Gently pull out the tube while at the same time pressing down the release collar on both sides.

Reverse the actions to assemble.

## 11.9 MAINFOLD TUBE

### Filter manifold tube

1. Remove the plastic zip ties and unclip the tube guide.

2. Hold the valve and press down the white release collar on both sides.
3. Gently pull out the tube while at the same time pressing down the release collar on both sides.

## 11.10 WATER FILTER

1. Unfasten the two screws on the cover of the water dispenser

Remove tubes as described in **Inlet tube**

2. Carefully remove the tubing secondary water valve and water filter – follow the same process as detailed in chapter. **Inlet tube**

3. Remove the screw mounting the secondary water valve.
4. Disconnect the wire connector and detach the secondary water valve.
5. To remove the water tank, gently bend the lower arm of the bracket outwards and push the tank down. The tank will pop out.

Note: Other tank in production, see Water supply overview image.

Remove screw

Disconnect wire.

Push tank down. Bend lower arm

## 11.11 DISPENSOR MODULE

1. Remove top cover to reach the water hose.
2. Pull out water hose approx. 10 cm.

3. Insert thin plastic tool to clip out the electronic board or use a suction cup.
4. Disconnect the wire connector.

5. Remove the cover of the water hose

6. Unfasten the two screws.

## 11.12 DISPENSOR PADDLE

1. Use a suction cup to pull out the dispenser paddle.
