

STEAM OVENS – WHITE & BROWN RESIDUES IN THE CAVITY

DESCRIPTION:

It's possible to see white or brown residues on the bottom of the cavity after using steam cycles.

White residues:

Residues depending on the hardness and the composition of the water.
Can occur at regular or irregular intervals.

Brown residues:

Residues (dried water minerals) depending on the ingredients of the water or residues (small food particles) after the combined use of standart and steam programs.
Can occur at regular or irregular intervals.

SOLUTION:

This is not a technical defect in the device.
Clean the oven cavity with a soft moist cloth after each use.

MODELS INVOLVED:

All Steam Ovens with external steam generator
